

### Cladograms for Tetrapoda

provides hypothesized evolutionary among a group of species based on early and derived characters.

CHART

As a cluster is a group of components, which often don't share the same characteristics, observed clusters are a common approximation. In other words, some clusters include more than one feature of a mechanism and other mechanisms without any feature. Hence, one might expect that the clusters are overlapping, and overlapping, small clusters.

## DEBUNKED CHARACTERS

Organisms that branch off after a hash mark share the derived character represented by the hash mark. An embryo protected by amniotic fluid is a derived character shared by all organisms in the amniota clade. Amphibians do not have this derived character.

Which groups of animals belong to the amniota clade? Which belong to the archosauria clade?
