Wayland, Warren G. McDonald, 2020-10-30 Strategic planning encompasses much more than simply writing up a strategic plan and calling it a day. Successful strategic planning also requires developing the analytical skills leaders need to overcome current challenges while figuring out how to thrive well into the future. This book shows the way. Strategic Analysis for Healthcare Concepts and Practical Applications presents a straightforward step by step approach to strategic analysis and strategy development in healthcare. Through its clear explanations of theoretical concepts supported by examples and applied exercises the book provides readers with practical methods for developing healthcare strategy. This second edition includes the following new features and more: A brand new chapter on population health, an increasingly important approach to value based care; Three additional new chapters on strategic directional indicators, strategy selection and justification and implementation plans and contingency planning; A substantially rewritten chapter on financial fit assessment and projection; Significant updates to many sections and topics including financial analysis, competitive benchmarking and organizational culture. With its short, engaging chapters this workbook can be used as a stand alone applied learning tool or in conjunction with an additional textbook. Perforated pages allow for easy use of the exercises as gradable assignments. The authors also mapped specific chapters from this book that can be taught alongside two other Health Administration Press titles: Strategic Healthcare Management: Planning and Execution, Second Edition and Healthcare Strategic Planning, Fourth Edition. Leaders must be able to assess and strategically manage change in healthcare as well as envision the future from a predictive, competitive and visionary perspective. This book is designed to provide current and future leaders alike with the knowledge and guidance to do so.

Healthcare Service Management Li Tao, Jiming Liu, 2019-05-08 Healthcare service systems are of profound importance in promoting the public health and wellness of people. This book introduces a data driven complex systems modeling approach D2CSM to systematically understand and improve the essence of healthcare service systems. In particular this data driven approach provides new perspectives on health service performance by unveiling the causes for service disparity such as spatio temporal variations in wait times across different hospitals. The approach integrates four methods: Structural Equation Modeling, SEM based analysis, integrated projection service management, strategy design and evaluation, and behavior based autonomy oriented modeling to address respective challenges encountered in performing data analytics and modeling studies on healthcare services. The thrust and uniqueness of this approach lies in the following aspects: Ability to explore underlying complex relationships between observed or latent impact factors and service performance; Ability to predict the changes and demonstrate the corresponding dynamics of service utilization and service performance; Ability to strategically manage service resources with the adaptation of unpredictable patient arrivals; Ability to figure out the working mechanisms that account for certain spatio temporal patterns of service utilization and performance. To show the practical effectiveness of the proposed systematic approach this book provides a series of pilot studies within the context of cardiac care in Ontario, Canada. The exemplified studies have unveiled some novel findings e.g. 1. service

accessibility and education may relieve the pressure of population size on service utilization 2 functionally coupled units may have a certain cross unit wait time relationship potentially because of a delay cascade phenomena 3 strategically allocating time blocks in operating rooms ORs based on a feedback mechanism may benefit OR utilization 4 patients and hospitals autonomous behavior and their interactions via wait times may bear the responsible for the emergence of spatio temporal patterns observed in the real world cardiac care system Furthermore this book presents an intelligent healthcare decision support iHDS system an integrated architecture for implementing the data driven complex systems modeling approach to developing analyzing investigating supporting and advising healthcare related decisions In summary this book provides a data driven systematic approach for addressing practical decision support problems confronted in healthcare service management This approach will provide policy makers researchers and practitioners with a practically useful way for examining service utilization and service performance in various what if scenarios inspiring the design of effectiveness resource allocation strategies and deepening the understanding of the nature of complex healthcare service systems
