## **The Chemical Treatment Of Cooling Water:**

*Chemical Treatment for Cooling Water* Alton J. Mathie,1998 The analysis clearly illustrates that when all factors are considered and the right technology is in use it is just as logical and cost effective to operate a cooling tower at very high cycles of concentration as it is to use a heavy bleed Specific topics include water conservation pollution control requirements corrosion prevention management of toxic polluting biocides and comparison of alternative technologies *The Chemical Treatment of Cooling Water* James W. Cooling Water Problems and Solutions Anuj Bhatia, 2015-02-28

The three primary reasons that the cooling water treatment may be required are to control corrosion scale formation and the growth of biological agents Any of these problems or more usually a combination of them can cause a loss of efficiency shorten equipment life and push up operating costs Imagine the large amounts of dollars lost when insufficient cooling suddenly curtails operations of process equipment s A very high percentage of people responsible for operation and maintenance of cooling water systems have little or no knowledge of water technology and are therefore totally reliant on specialist water treatment companies to provide up to date cost efficient water treatment programs suitable for their particular plants This 5 hr Quick Book presents an overview of common chemical treatment program that may be required to maintain cooling water systems in good operating condition Reasons and means are discussed for controlling scale deposition corrosion and biological fouling The discussion also covers the information on chemicals used for control and methods available to permit operation within the limits The course is divided in four 4 sections and three 3 annexures

**SECTION 1 SCALE INHIBITION**  
**SECTION 2 CORROSION INHIBITION**  
**SECTION 3 BACTERIAL MICROBIOLOGICAL CONTROL**  
**SECTION 4 WATER TREATMENT EQUIPMENT AND CONTROLS**

Annexure 1 Characteristics of some common scale inhibitors Annexure 2 Typical dosage rates pH range and characteristics of common corrosion inhibitors Annexure 3 Typical dosage rates pH range and characteristics of common biocides

The course is applicable to engineers and designers involved in power plants oil and gas chemical and petrochemical process facilities refineries industrial plants and HVAC systems in commercial buildings The reader must take a multiple choice quiz consisting of twenty five 25 questions at the end to enhance course learning

**Learning Objective** At the conclusion of this course the student will
