During the war he fell passionately in love and married a beautiful Acadian French woman in Philadelphia. After the war they made plans to return to his home at Ollioules, France. Homeward bound, the bourgeois doctor boarded the ship in Philadelphia with his new bride and their few belongings. There on deck he was unexpectedly forced to choose between his beloved homeland and family in France and his wife with child. Disembarking the ship with grave disappointment, John knowingly forfeited his inheritance as sole heir. Struggling to survive in Philadelphia, oftentimes John sat quietly admiring the beautiful woman who owned his heart as he secretly yearned for his prominent family and lifestyle on the Mediterranean Coast of France. Standing on the threshold of the newly independent America, the young doctor decided to take his wife and infant son and pioneer down the Great Wagon Road into the raw frontier of South Carolina. Believing he would build a new and prosperous life, he settled at Goshen Hill between the Tyger and Enoree Rivers within the lawless backcountry of South Carolina. Fighting the dangers and hardships of the frontier and the recurring restlessness to return to France, John and his family carved out a simple life. Although disappointed at times within the walls of his log home, the enduring love and warmth of his wife and six children transcended adversity and hardships of the outside world. The heartwarming story is filled with humanity as John faced his inevitable destiny. The first novel in the trilogy closes with Dr. Burel's widow standing helplessly in her front yard, watching the wagon train take her spirited children and grandchildren west in search of richer land and prosperity.

Observational Tests of Cosmological Inflation T. Shanks, A.J. Banday, Richard S. Ellis, Carlos S. Frenk, A.W. Wolfendale, 2012-12-06 This book represents the proceedings from the NATO sponsored Advanced Research Workshop entitled Observational Tests of Inflation held at the University of Durham England on the 10th-14th December 1990 In recent years the cosmological inflation model has drawn together the worlds of particle physics theoretical cosmology and observational astronomy The aim of the workshop was to bring together experts in all of these fields to discuss the current status of the inflation theory and its observational predictions The simplest inflation model makes clear predictions which are testable by astronomical observation Foremost is the prediction that the cosmological density parameter Ω_0 should have a value negligibly different from the critical Einstein-de Sitter value of 0.5 The other main prediction is that the spectrum of primordial density fluctuations should be Gaussian and take the Harrison-Zeldovich form The prediction that n_l in particular leads to several important consequences for cosmology Firstly there is the apparent contradiction with the limits on baryon density from Big Bang nucleosynthesis which has led to the common conjecture that weakly interacting particles rather than baryons may form the dominant mass constituent of the Universe Secondly with n_l the age of the Universe is uncomfortably short if Ω_0 the Hubble constant and the ages of the oldest star clusters lie within their currently believed limits
