Environments Chwee Beng Lee,José Hanham,Jimmie Leppink,2018-11-29 This book examines the types of problems and constraints faced by specialists in the areas of security medicine mental health aviation and engineering Every day we rely on highly trained specialists to solve complex problems in high stakes environments that is environments involving direct threats to the preservation of human life While previous work has tended to focus on problem solving in a single domain this book covers multiple related domains It is divided into three parts the first of which addresses the theoretical foundations with coverage of theories of instructional design and expertise Part two covers the five high stakes domains and offers directions for training in these domains In turn part three provides practical guidelines for instructional design in high stakes professions including learner analysis task analysis assessment and evaluation The book is intended for a broad readership including those who operate in high stress time pressure occupations Trainers at professional organisations can utilise the theoretical frameworks and training strategies discussed in this book when preparing their clients for complex real world problem solving Further the book offers a valuable resource for academics and graduate students as well as anyone with an interest in problem solving   Cognitive Task Analysis Jan Maarten Schraagen,Susan F. Chipman,Valerie L. Shalin,2000-06-01 Cognitive task analysis is a broad area consisting of tools and techniques for describing the knowledge and strategies required for task performance Cognitive task analysis has implications for the development of expert systems training and instructional design expert decision making and policymaking It has been applied in a wide range of settings with different purposes for instance specifying user requirements in system design or specifying training requirements in training needs analysis The topics to be covered by this work include general approaches to cognitive task analysis system design instruction and cognitive task analysis for teams The work settings to which the tools and techniques described in this work have been applied include 911 dispatching faultfinding on board naval ships design aircraft and various support systems The editors goal in this book is to present in a single source a comprehensive in depth introduction to the field of cognitive task analysis They have attempted to include as many examples as possible in the book making it highly suitable for those wishing to undertake a cognitive task analysis themselves The book also contains a historical introduction to the field and an annotated bibliography making it an excellent guide to additional resources   *The Application of Cognitive Task Analysis Methods to the Design of Instructional Materials for the World Wide Web* Gaye Freedman,2004   *Applied Cognitive Task Analysis in Aviation* Thomas L. Seamster,Richard E. Redding,George L. Kaempf,1997 Due to the requirements of automatic system design and new needs for the training of complex tasks Cognitive Task Analysis CTA has been used with increasing frequency in recent years by the airline industry and air traffic control community Its power is reflected in the literature on professional training and systems design where CTA is often cited as one of the most promising new technologies especially for the complex cognitive tasks now confronting those working in aviation The objective of this book is to bridge the gap between research and practice to make what we know about CTA available to practitioners in the field

The book focuses on cognitive psychology and artificial intelligence analyses of aviation tasks It is designed to help readers identify and solve specific design and training problems in the flight deck air traffic control and operations contexts Distilling experience and guidelines from the best aviation cognitive analyses in accessible form it is the first comprehensive volume on CTA and is written for practitioners of cognitive analysis in aviation It provides an overview of analyses to date methods of data collection and recommendations for designing and conducting CTA for use in instructional design systems development and evaluation The first part of the book provides the principles and foundations of CTA describing traditional approaches to task analysis and ways that cognitive analyses can be integrated with the analysis and development processes The next part details how to select the appropriate method or methods determine job tasks that can be trained for automatic performance extract knowledge structures analyse mental models and identify the decision making and problem solving strategies associated with experienced job performance The authors also describe when to use and how to design and conduct a cognitive task analysis how to use CTA along with traditional task analysis and ISD and how to use CTA in training program development and systems design as well as in personnel selection and evaluation The current demand for cognitive analyses makes this a timely volume for those in aviation and more generally the industrial development and training communities Readers will find this a thorough presentation of cognitive analyses in aviation and a highly usable guide in the design implementation and interpretation of CTA The book will be useful to instructional developers aviation equipment and systems designers researchers government regulatory personnel human resource managers instructors pilots air traffic controllers and operations staff **The Instructional Design Process** Jerrold E.
