*The New Chess Computer Book* T. D. Harding, 2014-05-17 The New Chess Computer Book is a revised edition of The Chess Computer Book that contains more than 50 percent new material about chess playing microcomputers Since the first edition of the book was written there have been large numbers of machines launched some of which the author has been able to test over a long period Inevitably there are new chess playing microcomputers machines and updated modules for older ones coming out all the time with launch dates for machines in different countries often being different due to commercial considerations However an attempt has been made to discuss in detail every top of the range machine available on the British market The book begins with a brief survey of the origins of chess computing and the development of chess playing machines This is followed by separate chapters on topics such as the types of machines that play chess modular chess computers computer hardware and software and developments in chess microcomputers in the latter half of 1984

**Computer Chess Compendium** D. LEVY, 2013-06-29 For many years I have been interested in computer chess and have collected almost every learned paper and article on the subject that I could find My files are now quite large and a considerable amount of time effort and expense has been required to build up this collection I have often thought how difficult it must be for many computer chess enthusiasts to acquire copies of articles that they see referenced in some other work Unless one has access to a good reference library the task is almost impossible I therefore decided to try to make available in one volume as many as possible of the most interesting and important articles and papers ever written on the subject Such a selection is naturally somewhat subjective and I hope that I will not offend authors whose works have been excluded In particular I have decided to exclude any material which has appeared in the Journal of the International Computer Chess Association ICCA or in its precursor the ICCA Newsletter The reason is simply that the ICCA itself is in the process of compiling a compendium containing the most important material published in those sources For further information on ICCA membership and publications the reader is invited to contact Professor H 1 van den Herik or Dr Jonathan Schaeffer University of Limburg Computing Science Department Department of Computer Science University of Alberta 6200 MD Maastricht Edmonton Netherlands Alberta Canada T6G 2H1

**Chess Skill in Man and Machine** P. W. Frey, 2012-12-06 Ten years of intensive effort on computer chess have produced notable progress Although the background information and technical details that were written in 1975 for the first edition of this book are still valid in most essential points hardware and software refinements have had a major impact on the effectiveness of these ideas The current crop of chess machines are performing at unexpectedly high levels The approach epitomized by the series of programs developed by David Slate and Larry Atkin at Northwestern in the middle 1970s i e a sophisticated search algorithm using very little chess knowledge was expected to reach an asymptotic level of performance no higher than that of a class A player USCF rating between 1800 and 2000 This perspective was argued quite vigorously by Eliot Hearst in Chapter 8 of the first edition and

was held at that time by many chess experts Subsequent events have clearly demonstrated that the asymptotic performance level for this type of program is at least as high as the master level USCF rating between 2200 and 2400 Current discussions now focus upon whether the earlier reservations were wrong in principle or simply underestimated the asymptote If there is a real barrier which will prevent this type of program from attaining a world championship level of performance it is not evident from the steady progress which has been observed during the last decade FTC Oversight United States.
