developing area of chemistry today This is due to the fact that research dealing with the structure of compounds and chemical bonding has been greatly intensified in recent years Additionally organometallic compounds have been widely utilized in catalysis organic synthesis electronics etc This book is based on my lectures concerning basic organometallic chemistry for fourth and fifth year chemistry students and on my lectures concerning advanced organometallic chemistry and homogeneous catalysis for Ph D graduate students Many recent developments in the area of organometallic chemistry as well as homogeneous catalysis are presented Essential research results dealing with a given class of organometallic compounds are discussed briefly Results of physicochemical research methods of various organometallic compounds as well as their synthesis properties structures reactivities and applications are discussed more thoroughly The selection of tabulated data is arbitrary because often it has been impossible to avoid omissions Nevertheless these data can be very helpful in understanding properties of organometallic compounds and their reactivities All physical data are given in SI units the interatomic distances are given in pm units in figures and tables I am indebted to Professor S A Duraj for translating and editing this book His remarks discussions and suggestions are greatly appreciated I also express gratitude to Virginia E Duraj for editing and proofreading

Inorganic Chemistry of the Transition Elements B. F. G. Johnson, 1978 Annotation Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume
