Carbohydrate Chemistry: Fundamentals And Applications Raimo Alen, 2018-03-13 This book presents a comprehensive approach to the versatile and fascinating field of carbohydrate chemistry. It covers besides the colorful historical perspective within the utilization of carbohydrates and their derivatives all modern aspects on their properties, nomenclature, uses and natural occurrence as such or as residues in a variety of biologically active molecules. Special emphasis is paid to various conversion techniques for producing value added chemicals, biofuels and other products from carbohydrate rich renewable resources. This book can be primarily used as an advanced textbook for a wide range of readers in many disciplines, not only students and teachers but also everyone who works in the laboratory as a researcher or in production and planning or who generally needs relevant knowledge of carbohydrates. Biochemistry Revisited Gurvinder Singh, Pranika Bhasin, 2023-11-24 Chemical reactions related to living beings are studied under biochemistry. As the name suggests, both biology and chemistry are encompassed under this subject. It is the functions, composition and structure of the substances that make up a living organism. In this book, our focus will be on the chemical processes that are going on in the human body in particular. It is the study of the constituents of cells such as proteins, carbohydrates, lipids, nucleic acids and other biomolecules and also of their structure, functions and transformations that occurring during a life process.

Analytical Characterization of Biotherapeutics Jennie R. Lill, Wendy Sandoval, 2017-08-14 The definitive guide to the myriad analytical techniques available to scientists involved in biotherapeutics research. Analytical Characterization of Biotherapeutics covers all current and emerging analytical tools and techniques used for the characterization of therapeutic proteins and antigen reagents. From basic recombinant antigen and antibody characterization to complex analyses for increasingly complex molecular designs, the book explores the history of the analysis techniques and offers valuable insights into the most important emerging analytical solutions. In addition, it frames critical questions warranting attention in the design and delivery of a therapeutic protein, exposes analytical challenges that may occur when characterizing these molecules and presents a number of tested solutions. The first single volume guide of its kind, Analytical Characterization of Biotherapeutics brings together contributions from scientists at the leading edge of biotherapeutics research and manufacturing. Key topics covered in depth include the structural characterization of recombinant proteins and antibodies, antibody de novo sequencing, characterization of antibody drug conjugates, characterization of bi-specific or other hybrid molecules, characterization of manufacturing host cell contaminant proteins, analytical tools for biologics molecular assessment and more. Each chapter is written by a recognized expert or experts in their field who discuss current and cutting edge approaches to fully characterizing biotherapeutic proteins and antigen reagents. Covers the full range of characterization strategies for large molecule based therapeutics. Provides an up to date account of the latest approaches.
