## Technological Change:

*Technological Change and Productivity Growth* Albert N. Link, 1987 First Published in 1987 Routledge is an imprint of Taylor Francis an informa company **Knowledge Flows, Technological Change and Regional Growth in the European Union** Małgorzata Runiewicz-Wardyn, 2013-06-14 The book provides conceptual and empirical insights into the complex relationship between knowledge flows and regional growth in the EU The author critically scrutinizes and enhances the RIS Regional Innovation System approach discussing innovation as a technological institutional and evolutionary process Moreover she advances the ongoing discourse on the role of space and technological proximity in the process of innovation and technological externalities The book closes with an investigation of the role of technological change and knowledge spillovers in the dynamic growth and catching up of EU regions *Creative Technological Change* Ian McLoughlin, 2002-03-11 Creative Technological Change draws upon a wide range of thinking from organisational theory innovation studies and the sociology of technology It explores the different ways in which these questions have been framed and answered especially in relation to new virtual technologies The idea of metaphor is used to capture the differences between and strengths and weaknesses of various ways of conceptualising the technology organisation relationship This approach offers the possibility of developing new ways of thinking about viewing and ultimately responding creatively to the organisational challenges posed by technological change Conceptualizing Technological Change Govindan Parayil, 1999 In this original and thoughtful book Govindan Parayil draws together current scholarship from disciplines ranging from history to economics to sociology as he develops a cohesive theory of technological change Drawing on a detailed case study of the Green Revolution in Indian agriculture Parayil convincingly argues that technological change is contingent upon the social historical process of knowledge change Technological Change and the Environment Arnulf Grüber, 2002-10-16 Much is written in the popular literature about the current pace of technological change But do we have enough scientific knowledge about the sources and management of innovation to properly inform policymaking in technology dependent domains such as energy and the environment While it is agreed that technological change does not fall from heaven like autumn leaves the theory data and models are deficient The specific mechanisms that govern the rate and direction of inventive activity the drivers and scope for incremental improvements that occur during technology diffusion and the spillover effects that cross fertilize technological innovations remain poorly understood In a work that will interest serious readers of history policy and economics the editors and their distinguished contributors offer a unique single volume overview of the theoretical and empirical work on technological change Beginning with a survey of existing research they provide analysis and case studies in contexts such as medicine agriculture and power generation paying particular attention to what technological change means for efficiency productivity and reduced environmental impacts The book includes a historical analysis of technological change an examination of the overall direction of technological change and general

theories about the sources of change The contributors empirically test hypotheses of induced innovation and theories of institutional innovation They propose ways to model induced technological change and evaluate its impact and they consider issues such as uncertainty in technology returns technology crossover effects and clustering A copublication o Resources for the Future RFF and the International Institute for Applied Systems Analysis IIASA ***Technological Change*** Clotilde Coron,Patrick Gibert,2020-04-09

Technological change is exciting as much as it is daunting The arrival of new digital tools affects consumption patterns types of employment and working conditions and can pose challenges to organizations and individuals alike Indeed although technological change is a factor for economic growth it can also be an amplifier or even a catalyst of inequality It is also a social change and interacts in complex ways technology is both the source and the consequence of social transformation To understand technological change and to harness its effects this book studies transformations at different levels societal organizational and individual In its analysis of the subject it also draws on a number of disciplines of the human and social sciences such as anthropology sociology and psychology ***Technological Change and Industrial Transformation*** Vicky Xiaoyan Long,Magnus Holmén,2021-08-18

Industrial transformation is a research and teaching field with a focus on the phenomenon and mechanisms of industrial development and renewal It concerns changes in economic activities caused by innovation competition and collaboration and has a rich heritage of evolutionary economics institutional economics industrial dynamics technology history and innovation studies It borrows concepts and models from the social sciences sociology history political sciences business management economics behavioural sciences and also from technology and engineering studies In this book the authors present the key theories frameworks and concepts of industrial transformation and use empirical cases to describe and explain the causes processes and outcomes of transformation in the context of digitalization and sustainability They stress that industrial transformation consists both of Darwinian survival of the fittest selection and of intentional pursuits of innovation and of industrial capabilities creation The work argues that managing the global trends of transformation is not only about new technology and innovation existing institutional settings and dynamic interactions between technological change organizational adaptation and economic activities also have a profound impact on future trajectories The areas under investigation are of great relevance for strategic management decisions and industrial and technology policies and understanding the mechanisms underlying transformation and sustainable growth ***Technological Change*** Robert Fox,1996

Technological Change gathers together examples of the best current thinking on methodology and the theoretical perspectives that are increasingly of concern to historians of technology whilst at the same time presenting other papers which reflect the state of the art in key areas of historical debate The volume emphasises the need both to establish a common forum for theoretical and empirical research and also to delineate the shared concerns of these two treatments which are too often reflected as conflicting rather than mutually supportive approaches to the writing of the history of technology ***Understanding***

*Technological Change* Chris DeBresson, Jim Petersen, 1987 A fresh look at technological change highlighting labor's role in creating these new technologies An indispensable guide Accessible thoroughly documented highly original Canadian Journal of Political Social Theory This book is one of the best available treatments of such a topic in a Canadian context Labour Le Travail Technological Change, Economic Development and Space Cristoforo S. Bertuglia, Manfred M. Fischer, Giorgio Preto, 2012-12-06 The pressures of global competition are affecting regions throughout the world and making it increasingly necessary to understand the complex underlying mechanisms and the potential for innovation offered by new technology Success in economic restructuring depends not only on the technology itself but the professional and entrepreneurial skills available and the support of provided by institutions and information networks The very local nature these phenomena which are critical to the innovative propensity of firms operating within the region introduces an inevitable spatial dimension The time therefore seems ripe to bring together contributions from scholars working in different but related disciplines with the aim of investigating the triangular relationship between technological change economic development and space The present volume offers a compact review of current theoretical developments and valuable insights deriving from recent empirical studies carried out both within Europe and elsewhere All those contributing to this volume are actively involved in research in the field Without their intellectual contribution and willingness to participate in this joint project the book would not have been possible We should like in addition to thank Angela Spence for her capable assistance in coordinating the various stages of preparation of the book as well as her translation work and careful linguistic editing Thanks also go to Paola Stasi for her meticulous copy editing and help in preparing the indices Their work has been invaluable in moulding together in a single volume contributions from so many different sources *Technological Change: Its Impact on Man and Society* Emmanuel G.
