A

A-A is the abbreviation for **atts** (10^{-12}), for metric systems.

A-Condition - An **A-Condition**, in a start-stop telecommunication system, the significant condition of the signal element that immediately precedes a character signal or block signal and prepares the receiving equipment for the reception of the code elements.

A-D - Abbreviation for **analog-to-digital**, for analog transmission. - Transmission of a continuously varying signal as opposed to transmission of a discretely varying signal.

A-law - See **a law algorithm**. - A standard compression algorithm, used in digital communications systems of the European digital hierarchy, to optimize, i.e., modify, the dynamic range of an analog signal for digitizing. **Note:** The wide dynamic range of speech does not lend itself well to efficient linear digital encoding. A-law encoding effectively reduces the dynamic range of the signal, thereby increasing the coding efficiency and resulting in a signal-to-distortion ratio that is superior to that obtained by linear encoding for a given number of bits.

Abandoned Call - A call in which the call originator disconnects or cancels the call after a connection has been made, but before the call is established.

Abandonment - Network replacement of a connect signal with an on-hook signal (network) prior to receiving a CI (subscriber installation) answer signal; abandonment is the only way to end an unanswered call attempt.

Abbreviated Address - An abbreviated Address is an address that has fewer characters than the full address, usually for special communications and other services or for certain users. **Note:** Examples of abbreviated addresses are (a) a four-digit telephone number for a user calling another user connected to the same switching exchange, and (b) message addresses that have only the addressee name and station code or number.

Abbreviated Address Calling - Calling that enables a user to employ an address having fewer characters than the full address when initiating a call. **Note:** Communications network users may be allowed to designate a given number of abbreviated address codes. The allocation of the abbreviated address codes to a destination or group of destinations may be changed as required, by means of a suitable procedure.

Abbreviated Dialing - A telephone service feature that (a) permits the user to dial fewer digits for access to network than are required under the normal numbering plan, and (b) is limited to a subscriber-selected set of frequently dialed numbers. Synonyms: speed dialing.

Abort - 1. In a computer or data transmission system, to terminate, usually in a controlled manner, a processing activity because it is impossible or undesirable for the activity to proceed. 2. In data transmission,
