Abstract: In China, with the deepening of the reform of industrial structures, the improvement of technological innovation has become a key issue. This is not only related to whether the strategic development of Chinese science and technology can be achieved, but also whether the Chinese economy and high-quality human capital can develop sustainably. Based on the theoretical boundary of sustainable development—free transfer of information—we see that sticky wages are the embodiment of information dissemination. Under the dual effects of profit-seeking behavior and information barriers, the relationship between the sticky wages of technological innovation talents (TIT), as the most profitable labor force, and technological innovation efficiency (TIE) has become more complex, and so far we still have a limited understanding of it. We explore this issue in an empirical study by using a two-stage chain Data Envelopment Analysis (DEA) of TIE followed by modifying the wages of TIT; finally, we build a collaborative evolution model with spatial effects on a large dataset (from 2007 to 2016). The results show that the overall Chinese TIE is relatively low, and in the central and western regions the TIE has been seriously reversed; there are also divergences in the TIE at different stages in the regions we focus on. As the output of technological innovation, except for initial results (such as patents), the more important value is whether it has an ability to transform the initial results into production, and the core of it is whether it can match the market environment and technology transfer system (for example, market mechanism, transformation incentive mechanism, and institutional mechanism). So, considering these aspects, the central and west of China are obviously insufficient, while the east has obvious advantages; this can also explain the results of spatial diffusion, namely, in the eastern region it is higher than in other areas, but the gap between them is gradually narrowing; lastly, from the perspective of synergy, the wage stickiness of TIT in the central region is larger than that of the eastern and western regions, and the evolutionary relationship in the former is “extruding” while in the latter it is “cooperative.” Mainly due to the popularity of the eastern innovation network and the initial state of the west, the barriers of information transmission are relatively low, while the central part is undergoing economic transformation, so its extreme demand for TIT has pushed up the cost of information transmission.

Batten, Cristoforo Sergio Bertuglia, Dino Martellato, Sylvie Occelli, 2012-12-06 In the global information society innovation is a highly pervasive process that influences all facets of human life cultural economic political and institutional A desire to comprehend the impacts of innovative change on so many areas of urban life prompted the research project that has resulted in the publication of this volume Our research confirms that we are presently in the midst of an era of rapid and explosive change The primary engine driving this latest transformation of the post industrial society is generally thought to be technological But such an explanation is too narrow Broadly speaking the age in which we find ourselves could be more aptly described as a global knowledge intensive age Many of today s knowledge intensive activities like research and development R D programs are being conducted with relative ease on a multinational scale As well as science having an increasing impact on processes of innovation R D activities also have become more complex We can observe a growing sophistication of learning by doing among creative economic agents This more sophisticated era of global knowledge exchange is facilitated by major advances in our infrastructure networks In this highly interactive world many innovations are by products of collective exchanges between cities far apart simplified by the ease of transport and communication Thus there is a need for us to look more closely at various collective sequences of learning knowledge exchange and innovation in a spatial setting This is the primary purpose of this book Innovation, Evolution and Complexity Theory Koen Frenken, 2006-03-29 The motivation behind this book is the desire to integrate complexity theory into economic models of technological evolution By means of developing an evolutionary model of complex technological systems the book contributes to the neo Schumpeterian literature on innovation diffusion and technological paradigms
