published two years after his father's death in 1882. The book was dedicated to his longtime friend and colleague Harvard botany professor Asa Gray as a small tribute of respect and affection. Using the four classifications established by Carl Linnaeus: hermaphroditic, monoecious, dioecious, polygamous, Darwin concentrated on two divisions of the hermaphroditic class: namely the cleistogamic and heterostyled. Darwin's reflections indicate the economy of nature through a process of gradual modification of plants, their structures being modified and degraded for the purpose of the large-scale production of seed, which is necessary and advantageous for survival. Darwin states, "Cleistogamic flowers are admirably fitted to yield a copious supply of seed at a wonderfully small cost to the plant." Francis Darwin indicated that the work on heterostylism had given his father extreme pleasure, especially as it had been one of the most puzzling bits of work he ever carried out. Darwin thought that hardly anyone had seen the full importance of heterostylism.
