## **The Earliest Memory:**

*Language, Memory, and Cognition in Infancy and Early Childhood* Janette B. Benson, Marshall M. Haith, 2010-05-22

Language cognition and memory are traditionally studied together prior to a researcher specializing in any one area. They are studied together initially because much of the development of one can affect the development of the others. Most books available now either tend to be extremely broad in the areas of all infant development including physical and social development or specialize in cognitive development, language acquisition or memory. Rarely do you find all three together despite the fact that they all relate to each other. This volume consists of focused articles from the authoritative *Encyclopedia of Infant and Early Childhood Development* and specifically targets the ages 0-3. Providing summary overviews of basic and cutting edge research, coverage includes attention, assessment, bilingualism, categorization, skills, critical periods, learning disabilities, reasoning, speech development, etc. This collection of articles provides an essential, affordable reference for researchers, graduate students, and clinicians interested in cognitive development, language development, and memory, as well as those developmental psychologists interested in all aspects of development. Focused content on age 0-3 saves time searching for and wading through lit on full age range for developmentally relevant info. Concise, understandable, and authoritative, easier to comprehend for immediate applicability in research.

**Remembering and Forgetting Early Childhood** Qi Wang, Sami Gülgöz, 2020-05-21. This book brings together scholarship that contributes diverse and new perspectives on childhood amnesia, the scarcity of memories for very early life events. The topics of the studies reported in the book range from memories of infants and young children for recent and distant life events to mother-child conversations about memories for extended lifetime periods and to retrospective recollections of early childhood in adolescents and adults. The methodological approaches are diverse and theoretical insights rich. The findings together show that childhood amnesia is a complex and malleable phenomenon and that the waning of childhood amnesia and the development of autobiographical memory are shaped by a variety of interactive social and cognitive factors. This book will facilitate discussion and deepen an understanding of the dynamics that influence the accessibility, content, accuracy, and phenomenological qualities of memories from early childhood. This book was originally published as a special issue of *Memory*.

**Earliest Childhood Memories** Arnold Bruhn, 1990-11-26. How is a sense of self formed from memory? It is difficult to conceptualize a psychology of the self without memory serving as the foundation. *Earliest Childhood Memories* provides a structure and a theory by which this question can be addressed. Cognitive-Perceptual Theory is the only personality theory grounded on autobiographical memory. In addition, Cognitive-Perceptual Theory addresses how personal growth and personality affect memory organization. When a personality change occurs, early memories change in a parallel manner to reflect the current world view and realign. The *Early Memories Procedure (EMP)*, the first procedure to assess autobiographical memory, consists of five spontaneous early memories, a particularly clear or important memory, fifteen directed memories of various types, several rating scales,

and open ended questions The procedure assesses all major clinically relevant areas of autobiographical memory The first non edited book on early memories addressed to professionals this volume will be of interest to analysts clinical psychologists psychiatrists social workers school psychologists and counselors
