Oberle,2025-12-11 Examining the early debates in the United States over how best to educate the constituents of the new nation When the founding fathers of the United States inaugurated a system of government that was unprecedented in the modern world they knew that a functioning democracy required an educated electorate capable of making rational decisions But who would validate the information that influenced citizens opinions By spotlighting various institutions of learning George Oberle provides a comprehensive look at how knowledge was created circulated and consumed in the early American republic Many of the founders including George Washington initially favored the creation of a centralized national university to educate Americans from all backgrounds Over the first half of the nineteenth century however politicians moved away from any notion of publicly educated laypeople generating useful knowledge The federal government ultimately founded the Smithsonian Institution in Washington DC to be run by experts only Oberle s insightful analysis of the competing ideas over the nature of education offers food for thought as we continue to grapple with a rapidly evolving media landscape amid contested meanings of knowledge expertise and the obligations of citizenship **The Worlds of Children, 1620-1920**
