**Recorded Solo Concert Spirituals, 1916-2022**, 2023-05-08 This work catalogs commercially produced recordings of Negro spirituals composed for solo concert vocalists. More than 5 000 tracks are listed with entries sourced from a variety of recording formats. The featured recordings enhance the study of concert spiritual performance in studio, concert, worship service or competition settings. Arranged alphabetically, entries variously identify the accompaniment including chorus, piano, orchestra, guitar, flute and violin in concert spiritual recordings. The voice types of soloists are included as is the level of dialect used by various performers. The composers, publishers and format information are also listed when available. While structured like a discography, this guide extends beyond solely providing historical context and encourages the use of the recordings themselves.

Discovery of Novel Natural Products with Therapeutic Potential Vincent P. Gullo, 2013-10-22  
Although science has discovered effective drugs for many of the diseases that afflict mankind, many human health problems remain untreatable. The search for novel therapeutic agents is always ongoing. This book will describe some of the diverse sources of natural products such as terrestrial and marine environments and will review how research has increased knowledge of biological systems and human disease, leading to the design of targeted assays amenable to high volume screening.

**Water-resources Investigations Report**, 1998 *Chemistry and Isotopic Composition of Ground Water Along a Section Near the Newmark Area, San Bernardino County, California* John Alex Izbicki, Wesley R. Danskin, Gregory O. Mendez, 1998

Vadose Zone Hydrology Daniel B. Stephens, 2018-02-06 Vadose Zone Hydrology describes the elements of the physical processes most often encountered by hydrogeologists and ground water engineers in their vadose zone projects. It illustrates the application of soil physics to practical problems relevant to the characterization and monitoring of the vadose zone. It includes an introduction to physical processes including basic flow theory and provides examples of important field scale processes that must be recognizable by hydrogeologists. Considerable attention is given to the concepts of recharge including how it is most accurately evaluated in the vadose zone. Field and laboratory methods for characterizing hydraulic properties in the vadose zone are also covered and case studies illustrating these methods are provided. New and emerging technologies for monitoring the vadose zone particularly for the purpose of detecting contaminants are highlighted. In the last section of the book additional case studies are presented demonstrating applications related to seepage detection, landfill monitoring and soil gas investigations. This book is written from the perspective of hydrogeologists and is designed to be directly applicable and to maintain continuity and consistency between chapters. It will be an invaluable primer for environmental or geotechnical consultants, regulators or students who have no prior formal academic training in unsaturated flow concepts. Because the text contains some of the latest advances in this field, it will be an excellent reference for geologists and engineers currently working on problems of vadose zone hydrology.
