**The Diamond Age** Neal Stephenson, 1998-08-27 CULT AUTHOR NEAL STEPHENSON S UNSTOPPABLE SCI FI CLASSIC The future is small The future is nano And who could be smaller or more insignificant than poor Little Nell an orphan girl alone and adrift in a world of Confucian Law Neo Victorian values and warring nanotechnology Well not quite alone Because Nell has a friend of sorts A guide a teacher an armed and unarmed combat instructor a book and a computer the Young Lady s Illustrated Primer is all these and much much more It is illicit magical dangerous And it isn t Nell s It was stolen And now some very powerful people want to get their hands on this highly desirable object Nell is about to discover that the world can feel very small indeed 6 0 stars Among the best books I have ever read GoodReads Review If Snow Crash was so good that cyberpunk went in to a coma The Diamond Age effectively pulled the plug GoodReads Review This is Great Expectations with nanotechnology GoodReads Review **The Diamond Age** Neal Stephenson, 2002 *Diamond age* Neal Stephenson, 1995 **Lost in Space** Rob Kitchin, James Kneale, 2005-12-23 Science fiction one of the most popular literary cinematic and televisual genres has received increasing academic attention in recent years For many theorists science fiction opens up a space in which the here and now can be made strange or remade where virtual reality and cyborg are no longer gimmicks or predictions but new spaces and subjects Lost in space brings together an international collection of authors to explore the diverse geographies of spaceexploring imagination nature scale geopolitics modernity time identity the body power relations and the representation of space The essays explore the writings of a broad selection of writers including J G Ballard Frank Herbert Marge Piercy Kim Stanley Robinson Mary Shelley and Neal Stephenson and films from Bladerunner to Dark City The Fly The Invisible Man and Metropolis **Tomorrow through the Past** Jon Lewis, 2008-12-18 Tomorrow Through the Past Neal Stephenson and the Project of Global Modernization is the first collection of scholarly essays dedicated exclusively to this important voice in contemporary American fiction The collection grew from five essays originally presented at the 2006 XXth Century Literature Conference at the University of Louisville and the contributors are made up of graduate students independent scholars and university professors who hope the collection will aid general readers as well as instructors teaching Stephenson and professionals building the critical response to his work Reading through the lenses of history and linguistic cultural and science fiction studies the essays in the collection examine each of Stephenson s novels from The Big U to The Baroque Cycle as well as his long non fiction work on computer operating systems In the Beginning Was the Command Line Included in this collection is a new interview conducted with Stephenson during the summer of 2006 Eclipse of Man Charles T. Rubin, 2014-09-02 Tomorrow has never looked better Breakthroughs in fields like genetic engineering and nanotechnology promise to give us unprecedented power to redesign our bodies and our world Futurists and activists tell us that we are drawing ever closer to a day when we will be as smart as computers will be able to link our minds telepathically and will live for centuries or maybe forever The perfection of a post human future awaits us Or so the story

goes In reality the rush toward a post human destiny amounts to an ideology of human extinction an ideology that sees little of value in humanity except the raw material for producing whatever might come next In *Eclipse of Man* Charles T Rubin traces the intellectual origins of the movement to perfect and replace the human race He shows how today s advocates of radical enhancement are like their forebears deeply dissatisfied with given human nature and fixated on grand visions of a future shaped by technological progress Moreover Rubin argues that this myopic vision of the future is not confined to charlatans and cheerleaders promoting this or that technology it also runs through much of modern science and contemporary progressivism By exploring and criticizing the dreams of post humanity Rubin defends a more modest vision of the future one that takes seriously both the limitations and the inherent dignity of our given nature     Encyclopedia of Nanoscience and Society David H. Guston,2010-07-14 Labeled either as the next industrial revolution or as just hype nanoscience and nanotechnologies are controversial touted by some as the likely engines of spectacular transformation of human societies and even human bodies and by others as conceptually flawed These challenges make an encyclopedia of nanoscience and society an absolute necessity Providing a guide to what these understandings and challenges are about the Encyclopedia of Nanoscience and Society offers accessible descriptions of some of the key technical achievements of nanoscience along with its history and prospects Rather than a technical primer this encyclopedia instead focuses on the efforts of governments around the world to fund nanoscience research and to tap its potential for economic development as well as to assess how best to regulate a new technology for the environmental occupational and consumer health and safety issues related to the field Contributions examine and analyze the cultural significance of nanoscience and nanotechnologies and describe some of the organizations and their products that promise to make nanotechnologies a critical part of the global economy Written by noted scholars and practitioners from around the globe these two volumes offer nearly 500 entries describing the societal aspects of nanoscience and nanotechnology Key Themes Art Design and Materials Bionanotechnology Centers Context Economics and Business Engagement and the Public Environment and Risk Ethics and Values Geographies and Distribution History and Philosophy Integration and Interdisciplinarity Nanotechnology Companies Nanotechnology Organizations     *Diamond: Genesis, Mineralogy and Geochemistry* Karen Smit,Steve Shirey,Graham Pearson,Thomas Stachel,Fabrizio Nestola,Thomas Moses,2023-06-06 Diamond is the record setter in many mineralogical properties such as hardness diffusivity thermal conductivity purity and covalency of bonding Similarly diamond as the premier gemstone of the mantle holds primacy for geological features such as age and depth of origin Diamond was among the first crystalline structures to be solved by X ray diffraction and the first materials measured for their Raman spectrum At more than 80 billion USD in yearly commercial value diamond sets the record for the most traded valuable mineral on the planet Despite its chemical simplicity diamond has been the object of more research effort and had more scientific and popular press pages written about it than any other mineral     *Cassier's Magazine* ,1898     Annual Report New South Wales.
