[Experience Music Experiment](#) William Brooks, 2021-08-19 Truth happens to an idea So wrote William James in 1907 and twenty four years later John Dewey argued that artistic experience entailed a process of doing and undergoing But what do these ideas have to do with music or with research conducted in and through music that is with artistic research In this collection of essays fourteen very different authors respond with distinct and challenging perspectives Some report on their own experiments and experiences some offer probing analyses of noteworthy practices some view historical continuities through the lens of pragmatism and artistic experiment The resulting collection yields new insights into what musicians do how they experiment and what they experience insights that arise not from doctrine but from diverse voices seeking common ground in and through experimental discourse artistic research in and of itself

Sound Research for Troubling Times jessie l. beier, Owen Chapman, 2024-12-21 This edited collection takes the prompt hope in crisis as a starting point for investigating sound research as it is situated in these troubling times The book brings together thinkers from numerous scholarly domains i e communication studies art education creative art therapy psychology and philosophy to explore the question of hope as it relates to sonic research creation practices in and times of crisis Some of the prompts and provocations explored by the authors within the collection include but are not limited to explorations of sonic research creation practices as they are situated within contemporary convergence of crises theoretical investigations of the concept of hope as it relates to sonic temporalities ontologies and epistemologies articulations of experimental sonic pedagogies examinations of hope as it plays out in institutional settings and or sound and music scenes i e music education artistic communities activist communities investigations of experimental listening practices as they relate to contemporary crises explorations of post human non human and inhuman sonic resonances in research creation practices and experimental practices that deploy sound and sonic approaches for emergent collective research both within but also outside of academic institutions Positioned as a material that holds the potential to frustrate common approaches to research whether through its refusal of occularcentric perspectives its leaky data protocols or its distortion of future horizons sound is explored here as that which might counter the default refrains that have pushed hope itself into crisis Importantly while sound research is explored in this book in relation to hope it is not offered up as a better way forward nor is it presented as a solution Sound research is instead posed as a question with each author responding in their own way through experiments with the potentials but also limits of and for sonic practices Central to the project then is the question of how to collectively and creatively respond to the increasingly difficult even untenable circumstances that have come to limit future possibilities both within fields of research but also beyond without falling back on the unquestioned assumption that hope alone will actualize a
