## Synchronizing Esecurity:

*Secure Localization and Time Synchronization for Wireless Sensor and Ad Hoc Networks* Radha Poovendran, Cliff Wang, Sumit Roy, 2007-12-03 Localization is a critical process in mobile ad hoc networks and wireless sensor networks. Wireless sensor nodes or MANET devices need to know the network's location or its relative location with respect to the rest of the network neighbors. However, due to the open spectrum nature of wireless communication, it is subject to attacks and intrusions. Hence, the wireless network synchronization needs to be both robust and secure. Furthermore, issues such as energy constraints and mobility make the localization process even more challenging. *Secure Localization and Time Synchronization for Wireless Sensor and Ad Hoc Networks* presents the latest research results in the area of secure localization for both wireless mobile ad hoc networks and wireless sensor networks. *Security Compliance in Model-driven Development of Software Systems in Presence of Long-Term Evolution and Variants* Sven Matthias Peldszus, 2022-07-13 For ensuring a software system's security, it is vital to keep up with changing security precautions, attacks, and mitigations. Although model-based development enables addressing security already at design time, design models are often inconsistent with the implementation or among themselves. An additional burden are variants of software systems. To ensure security in this context, we present an approach based on continuous automated change propagation, allowing security experts to specify security requirements on the most suitable system representation. We automatically check all system representations against these requirements and provide security-preserving refactorings for preserving security compliance. For both, we show the application to variant-rich software systems. To support legacy systems, we allow to reverse engineer variability-aware UML models and semi-automatically map existing design models to the implementation. Besides evaluations of the individual contributions, we demonstrate the approach in two open-source case studies: the iTrust electronics health records system and the Eclipse Secure Storage. *Chaos Synchronization and Cryptography for Secure Communications: Applications for Encryption* Banerjee, Santo, 2010-07-31 Over the past few decades, there have been numerous research studies conducted involving the synchronization of dynamical systems with several theoretical studies and laboratory experimentations demonstrating the pivotal role for this phenomenon in secure communications. *Chaos Synchronization and Cryptography for Secure Communications: Applications for Encryption* explores the combination of ordinary and time-delayed systems and their applications in cryptographic encoding. This innovative publication presents a critical mass of the most sought-after research providing relevant theoretical frameworks and the latest empirical research findings in this area of study. **Chaotic Secure Communication** Kehui Sun, 2016-09-26 The monograph begins with a systematic introduction of chaos and chaos synchronization and then extends to the methodologies and technologies in secure communication system design and implementation. The author combines theoretical frameworks with empirical studies, making the book a practical reference for both academics and industrial engineers. *Proceedings of the ...
