Consciousness and Emotion in Cognitive Science Andy Clark, 1998-09-01 Summarizes and illuminates two decades of research Gathering important papers by both philosophers and scientists this collection illuminates the central themes that have arisen during the last two decades of work on the conceptual foundations of artificial intelligence and cognitive science Each volume begins with a comprehensive introduction that places the coverage in a broader perspective and links it with material in the companion volumes The collection is of interest in many disciplines including computer science linguistics biology information science psychology neuroscience iconography and philosophy Examines initial efforts and the latest controversies The topics covered range from the bedrock assumptions of the computational approach to understanding the mind to the more recent debates concerning cognitive architectures all the way to the latest developments in robotics artificial life and dynamical systems theory The collection first examines the lineage of major research programs beginning with the basic idea of machine intelligence itself then focuses on specific aspects of thought and intelligence highlighting the much discussed issue of consciousness the equally important but less densely researched issue of emotional response and the more traditionally philosophical topic of language and meaning Provides a gamut of perspectives The editors have included several articles that challenge crucial elements of the familiar research program of cognitive science as well as important writings whose previous circulation has been limited Within each volume the papers are organized to reflect a variety of research programs and issues The substantive introductions that accompany each volume further organize the material and provide readers with a working

Rossiter, John F. Hamilton, 1986 *Information Technology and the Corporation of the 1990s* Thomas J. Allen, Michael S. Scott Morton, 1994-01-06 One of the most pathbreaking and influential business books of the 1990s is *The Corporation of the 1990s* by Michael Scott Morton. Its expert view of how information technology would influence organizations and their ability to survive and prosper in the 1990s has become the benchmark of thinking about information technology. Now in a supporting companion volume *Information Technology and the Corporation of the 1990s* makes available the research on which *The Corporation of the 1990s* was based. The research was conducted at the Sloan School of Management at MIT by the Management in the 1990s program. The program was funded by a group of 12 industrial and government sponsors from the United States and Britain which included American Express, Digital Equipment Corporation, Eastman Kodak, British Petroleum, MCI Communications, General Motors, U.S. Army, ICL Ltd, Internal Revenue Service, Ernst Young, BellSouth, and CIGNA Corporation. *Information Technology and the Corporation of the 1990s* aims to disseminate ideas on how organizations can manage the impact of information technology and also to raise issues and stimulate further thought by both academics and professionals. The book is divided into three sections which cover the information technology revolution, strategic options, and organization and management responses. It incorporates the work of many important scholars including Charles Jonscher, Michael J. Piore, Thomas W. Malone, JoAnne Yates, Robert I. Benjamin, Gary W. Loveman, Eric von Hippel, Edgar H. Major discoveries are anticipated. But it is our conviction that the pace of discoveries will be severely impeded unless a concerted effort is made to deploy and employ advanced computing techniques.
