During work the decision to launch as third jet transport (after the 507 and 505 in November 1944, under the formal commitment to put the new type into production) had to wait until firm orders orders were forthcoming. In the event, this point was reached on 19 February 1945 when the German airline Luftwaffe announced a contract for 25 Boeing 505s (at a price, including spares, of about £100,000 (£13,000 each)). The launch decision came after a period of intensive design

Advancements in Electric Machines J. F. Gieras, 2008-11-14 Traditionally electrical machines are classified into d c commutator brushed machines induction asynchronous machines and synchronous machines These three types of electrical machines are still regarded in many academic curricula as fundamental types despite that d c brushed machines except small machines have been gradually abandoned and PM brushless machines PMBM and switched reluctance machines SRM have been in mass production and use for at least two decades Recently new topologies of high torque density motors high speed motors integrated motor drives and special motors have been developed Progress in electric machines technology is stimulated by new materials new areas of applications impact of power electronics need for energy saving and new technological challenges The development of electric machines in the next few years will mostly be stimulated by computer hardware residential and public applications and transportation systems land sea and air At many Universities teaching and research strategy oriented towards electrical machinery is not up to date and has not been changed in some countries almost since the end of the WWII In spite of many excellent academic research

achievements the academia industry collaboration and technology transfer are underestimated or quite often neglected Underestimation of the role of industry unfamiliarity with new trends and restraint from technology transfer results with time in lack of external nancial support and drastic cline in the number of students interested in Power Electrical Engineering

Stratospheric Flight Andras Sóbester,2011-06-28 In this book Dr Andras Sobester reviews the science behind high altitude flight He takes the reader on a journey that begins with the complex physiological questions involved in taking humans into the death zone How does the body react to falling ambient pressure Why is hypoxia oxygen deficiency associated with low air pressure so dangerous and why is it so difficult to design out of aircraft why does it still cause fatalities in the 21st century What cabin pressures are air passengers and military pilots exposed to and why is the choice of an appropriate range of values such a difficult problem How do high altitude life support systems work and what happens if they fail What happens if cabin pressure is lost suddenly or even worse slowly and unnoticed The second part of the book tackles the aeronautical problems of flying in the upper atmosphere What loads does stratospheric flight place on pressurized cabins at high altitude and why are these difficult to predict What determines the maximum altitude an aircraft can climb to What is the coffin corner and how can it be avoided The history of aviation has seen a handful of airplanes reach altitudes in excess of 70 000 feet what are the extreme engineering challenges of climbing into the upper stratosphere Flying high makes very high speeds possible what are the practical limits The key advantage of stratospheric flight is that the aircraft will be above the weather but is this always the case Part three of the book investigates the extreme atmospheric conditions that may be encountered in the upper atmosphere How high can a storm cell reach and what is it like to fly into one How frequent is high altitude clear air turbulence what causes it and what are its effects on aircraft The stratosphere can be extremely cold how cold does it have to be before flight becomes unsafe What happens when an aircraft encounters volcanic ash at high altitude Very high winds can be encountered at the lower boundary of the stratosphere what effect do they have on aviation Finally part four looks at the extreme limits of stratospheric flight How high will a winged aircraft will ever be able to fly What are the ultimate altitude limits of ballooning What is the greatest altitude that you could still bail out from And finally what are the challenges of exploring the stratospheres of other planets and moons The author discusses these and many other questions the known knowns the known unknowns and the potential unknown unknowns of stratospheric flight through a series of notable moments of the recent history of mankind s forays into the upper atmospheres each of these incidents accidents or great triumphs illustrating a key aspect of what makes stratospheric flight aviation at the limit *Airways*

,2007 **Proceedings of the International Conference on Computer Science, Electronics and Industrial Engineering (CSEI 2024)** Marcelo V. Garcia,John-Paul Reyes,Carlos Nuñez,Carlos Gordón-Gallegos,2026-01-01 This book captures the dynamic spirit of technological advancement and interdisciplinary collaboration showcased at the sixth edition of the conference This second volume of the proceedings from the VI International Conference on Computer Science

Electronics and Industrial Engineering CSEI 2024 presents a wide ranging collection of innovative research under the theme Emerging Technologies in Communication Manufacturing and Renewable Energy Systems The contributions span several key areas where digital transformation is reshaping traditional practices Educational informatics features prominently demonstrating how virtual reality augmented reality and artificial intelligence are creating more inclusive and personalized learning environments These developments are particularly impactful in areas such as chemistry education traffic safety training and the support of learners with special educational needs Further chapters explore the integration of cyber physical systems and Internet of Things technologies in applications ranging from smart manufacturing to precision agriculture Healthcare innovation also finds its place with research on early detection of neurodegenerative diseases and advanced physiological signal processing reflecting the convergence of digital intelligence and human wellbeing The book also delves into transformative approaches in production and industrial engineering From sustainable agro industrial processes to occupational safety under the Industry 5.0 paradigm authors explore how human centered and environmentally conscious design is becoming a cornerstone of technological development Software innovations and digital tools highlight the importance of usability and efficiency with contributions such as gamified rehabilitation systems and agricultural management platforms Finally advances in automated manufacturing and control systems reveal how robotics and real time monitoring are driving efficiency and resilience across sectors from agricultural automation to aerospace training systems

Runway Overrun and Collision Southwest Airlines Flight 1248, Boeing 737-7H4, N471WN, Chicago Midway International Airport, Chicago, Ill, December 8, 2005 United States. National Transportation Safety Board, 2007 On December 8 2005 about 1914 central standard time Southwest Airlines SWA flight 1248 a Boeing 737-7H4 N471WN ran off the departure end of runway 31C after landing at Chicago Midway International Airport Chicago Illinois The airplane rolled through a blast fence an airport perimeter fence and onto an adjacent roadway where it struck an automobile before coming to a stop A child in the automobile was killed one automobile occupant received serious injuries and three other automobile occupants received minor injuries Eighteen of the 103 airplane occupants 98 passengers 3 flight attendants and 2 pilots received minor injuries and the airplane was substantially damaged The airplane was being operated under the provisions of 14 Code of Federal Regulations Part 121 and had departed from Baltimore Washington International Thurgood Marshall Airport Baltimore Maryland about 1758 eastern standard time Instrument meteorological conditions prevailed at the time of the accident flight which operated on an instrument flight rules flight plan The National Transportation Safety Board determined that the probable cause of this accident was the pilots failure to use available reverse thrust in a timely manner to safely slow or stop the airplane after landing which resulted in a runway overrun This failure occurred because the pilots first experience and lack of familiarity with the airplane autobrake system distracted them from thrust reverser usage during the challenging landing snip The safety issues discussed in this report include the flight crew's decisions and actions the
