The Science of the Individual: Leibniz's Ontology of Individual Substance Stefano Bella, 2005-08-22 In his well known Discourse on Metaphysics Leibniz puts individual substance at the basis of metaphysical building In so doing he connects himself to a venerable tradition His theory of individual concept however breaks with another idea of the same tradition that no account of the individual as such can be given Contrary to what has been commonly accepted Leibniz s intuitions are not the mere result of the transcription of subject predicate logic nor of the uncritical persistence of some old metaphysical assumptions They grow instead from an unprejudiced inquiry about our basic ontological framework where logic of truth linguistic analysis and phenomenological experience of the mind s life are tightly interwoven Leibniz s struggle for a concept capable of grasping concrete individuals as such is pursued in an age of great paradigm changes from the Scholastic background to Hobbes s nominalism to the Cartesian way of ideas or Spinoza s substance metaphysics when the relationships among words ideas and things are intensively discussed and wholly reshaped This is the context where the genesis and significance of Leibniz s theory of complete being and its concept are reconstrued The result is a fresh look at some of the most perplexing issues in

Leibniz scholarship like his ideas about individual identity and the thesis that all its properties are essential to an individual. The questions Leibniz faces and to which his theory of individual substance aims to answer are yet to a large extent those of contemporary metaphysics: how to trace a categorial framework, how to distinguish concrete and abstract items, what is the metaphysical basis of linguistic predication, how is trans-temporal sameness assured, how to make sense of essential attributions. In this ontological framework Leibniz's further questions about the destiny of human individuals and their history are spelt out. Maybe his answers also have something to tell us. This book is aimed at all who are interested in Leibniz's philosophy, history of early modern philosophy and metaphysical issues in their historical development.

The First Part of the Institutes of the Lawes of England. Or, A Commentarie Vpon Littleton, Not the Name of a Lawyer Onely, But of the Law it Selfe ... Sir Edward Coke, 1628

Chtimi Timothy Pooley, 1996. The different ways in which a language may be pronounced is not only a constant source of fascination for speakers and learners but also a powerful symbol of regional identity. Using recordings of spontaneous speech by working class speakers from an urban industrial environment in northern France, Tim Pooley traces the development of the urban vernacular of the Lille area, often referred to as Chtimi, from a traditional patois to a variety of Regional French against the background of the social changes that have occurred in the speakers' lifetimes. The result is firstly a study in sociolinguistic variation, both from the structural and sociolinguistic viewpoints; secondly, an analysis of language shift in a context where the obsolescent language is closely related to the dominant variety; and thirdly, a detailed analysis of the key features of the phonology and grammar of northern Regional French. It is also one of the first studies concerned with France to show how network factors may influence speakers' use of French.

Social Change and Sustainable Transport William Richard Black, Peter Nijkamp, 2002-11-29. Transportation research has traditionally been dominated by engineering and logistics research approaches. This book integrates social, economic and behavioral sciences into the transportation field. As its title indicates, emphasis is on socioeconomic changes which increasingly govern the development of the transportation sector. The papers presented here originated at a conference on Social Change and Sustainable Transport held at the University of California at Berkeley in March 1999 under the auspices of the European Science Foundation and the National Science Foundation. The contributors, who represent a range of disciplines including geography and regional science, economics, political science, sociology and psychology, come from twelve different countries. Their subjects cover the consequences of environmentally sustainable transportation vs. the business as usual status quo, the new phenomenon of edge cities, automobile dependence as a social problem, the influence of leisure or discretionary travel and of company cars, the problems of freight transport, the future of railroads in Europe, the imposition of electronic road tolls, potential transport benefits of e-commerce and the electric car.
