Abel,2012-12-06 I have written this book because I felt there was a need to bring together in one place the vast amount of research that has been published in the past 10 years concerning alcohol s effects on the conceptus My hope is that this book will be of value to the many clinicians basic research scientists social workers and others who are interested in this important issue The number of such publications continues to grow each year and it was a very difficult task to review even a proportion of them completely While I have cited many of these research studies only those that in my very subjective opinion warranted extended coverage were discussed In this regard much of my ask was facilitated by the many excellent reviews that have already been written To those whose important contributions have not been discussed or cited I offer my sincere apologies Omission of these publications in most cases reflects my own personal interests or awareness rather than merit **Fetal Alcohol Syndrome** Institute of Medicine,Committee to Study Fetal Alcohol Syndrome,1996-04-01 It sounds simple Women who drink while pregnant may give birth to children with defects so women should not drink during pregnancy Yet in the 20 years since it was first described in the medical literature fetal alcohol syndrome FAS has proved to be a stubborn problem with consequences as serious as those of the more widely publicized crack babies This volume discusses FAS and other possibly alcohol related effects from two broad perspectives diagnosis and surveillance and prevention and treatment In addition it includes several real life vignettes of FAS children The committee examines fundamental concepts for setting diagnostic criteria in general reviews and updates the diagnostic criteria for FAS and related conditions and explores current research findings and problems associated with FAS epidemiology and surveillance In addition the book describes an integrated multidisciplinary approach to research on the prevention and treatment of FAS The committee Discusses levels of preventive intervention Reviews available data about women and alcohol abuse and treatment among pregnant women Explores the psychological and behavioral consequences of

FAS at different ages Examines the current state of knowledge about medical and therapeutic interventions education efforts and family support programs This volume will be of special interest to physicians nurses mental health practitioners school and public health officials policymakers researchers educators and anyone else involved in serving families and children especially in high risk populations Prevention of Fetal Alcohol Spectrum Disorder FASD Sterling,Clarren,Amy

Salmon,Egon Jonsson,2011-05-09 Exposing a developing embryo or fetus to alcohol can produce life long brain damage with neurological cognitive and behavioural consequences The implications of fetal alcohol spectrum disorder for the affected individual and the family are devastating The social and economic burden to society is enormous with formidable expenditures in health care mental health care education social services and possibly correctional services Prevention has been a goal since the condition was medically described and defined forty years ago but has remained elusive but feasible This book reviews the evidence for effective strategies It lays out what needs to be done The book should be of great value to policy makers clinicians researchers and others advocating for action against this condition that is reducing the potential of our society and sapping its resources

Fetal Alcohol Syndrome (FAS) and Fetal Alcohol Spectrum Disorders (FASD) -- Conditions and Interventions ,2016 Fetal Alcohol Spectrum Disorders Barry Carpenter OBE,Carolyn Blackburn,Jo Egerton,2013-10-08 Fetal alcohol spectrum disorders FASDs have emerged as a major phenomenon within the education health criminal justice and social care systems of many countries with current prevalence figures suggesting that one in a hundred children and young people have FASDs In this publication academics professionals and families from around the world have shared

expertise and insights on FASDs Their combined interdisciplinary perspective makes an invaluable contribution to how we understand and address the complex social educational and health needs associated with this growing group of children and young people Articulating fundamental knowledge cutting edge initiatives and emerging trends in FASDs this book provides an evidence base that will enable services to identify and respond to the need for action on FASDs It recognises that families natural foster or adoptive are at the heart of this process and that their rich knowledge base grounded in their lived experience is crucial Any education social care criminal justice or health professional working with children and young people with FASDs and their families will find this book a seminal and authoritative resource *Genetics and Epigenetics of Fetal Alcohol Spectrum Disorders* Feng C. Zhou, Stephen Mason, 2015-08-06 Women drinking during pregnancy can result in Fetal Alcohol Spectrum Disorder FASD which may feature variable neurodevelopmental deficits facial dysmorphology growth retardation and learning disabilities Research suggests the human brain is precisely formed through an intrinsic genetic cellular expression that is carefully orchestrated by an epigenetic program This program can be influenced by environmental inputs such as alcohol Current research suggests the genetic and epigenetic elements of FASD are heavily intertwined and highly dependent on one another As such now is the time for investigators to combine genetic genomic and epigenetic components of alcohol research into a centralized accessible platform for discussion Genetic analyses inform gene sets which may be vulnerable to alcohol exposure during early neurulation Prenatal alcohol exposure indeed alters expression of gene subsets including genes involved in neural specification hematopoiesis methylation chromatin remodeling histone variants eye and heart development Recently quantitative genomic mapping has revealed loci QTLs that mediate alcohol induced phenotypes identified between two alcohol drinking mouse strains One question to consider is besides the role of dose and stage of alcohol exposure why only 5% of drinking women deliver newborns diagnosed with FAS Fetal Alcohol Syndrome Studies are ongoing to answer this question by characterizing genome wide expression allele specific expression ASE gene polymorphisms SNPs and maternal genetic factors that influence alcohol vulnerability Alcohol exposure during pregnancy which can lead to FASD has been used as a model to resolve the epigenetic pathway between environment and phenotype Epigenetic mechanisms modify genetic outputs through alteration of 3D chromatin structure and accessibility of transcriptional machinery Several laboratories have reported altered epigenetics including DNA methylation and histone modification in multiple models of FASD During development DNA methylation is dynamic yet orchestrated in a precise spatiotemporal manner during neurulation and coincidental with neural differentiation Alcohol can directly influence epigenetics through alterations of the methionine pathway and subsequent DNA or histone methylation acetylation Alcohol also alters noncoding RNA including miRNA and transposable elements TEs Evidence suggests that miRNA expression may mediate ethanol teratology and TEs may be affected by alcohol through the alteration of DNA methylation at its regulatory region In this manner the epigenetic and genetic components of FASD are revealing themselves to be mechanistically

intertwined Can alcohol induced epigenomic alterations be passed across generations Early epidemiological studies have revealed infants with FASD like features in the absence of maternal alcohol where the fathers were alcoholics Novel mechanisms for alcohol induced phenotypes include altered sperm DNA methylation hypomethylated paternal allele and heritable epimutations These studies predict the heritability of alcohol induced epigenetic abnormalities and gene functionality across generations We opened a forum to researchers and investigators the field of FASD to discuss their insights hypotheses fresh data past research and future research themes embedded in this rising field of the genetics and epigenetics of FASD This eBook is a product of the collective sharing and debate among researchers who have contributed or reviewed each subject
