Essays on Husserl's Logic and Philosophy of Mathematics Stefania Centrone, 2017-09-07 *Essays on Husserl's Logic and Philosophy of Mathematics* sets out to fill up a lacuna in the present research on Husserl by presenting a precise account of Husserl's work in the field of logic of the philosophy of logic and of the philosophy of mathematics. The aim is to provide an in-depth reconstruction and analysis of the discussion between Husserl and his most important interlocutors and to clarify pivotal ideas of Husserl's by considering their reception and elaboration by some of his disciples and followers such as Oskar Becker and Jacob Klein as well as their influence on some of the most significant logicians and mathematicians of the past century such as Luitzen E J Brouwer, Rudolf Carnap, Kurt Godel and Hermann Weyl. Most of the papers consider Husserl and another scholar e.g. Leibniz, Kant, Bolzano, Brentano, Cantor, Frege and trace out and contextualize lines of influence, points of contact and points of disagreement. Each essay is written by an expert of the field and the volume includes contributions both from the analytical tradition and from the phenomenological one. **Report** International Clearinghouse on Science and Mathematics Curricular Developments, 1972
