Abstract

For doctors and other medical staff treating oral cancer, it is necessary to standardize the basic concepts and rules for oral cancer to achieve progress in its treatment, research, and diagnosis. Oral cancer is an integral part of head and neck cancer and is treated in accordance with the general rules for head and neck cancer. However, detailed rules based on the specific characteristics of oral cancer are essential. The objective of this article was to contribute to the development of the diagnosis, treatment, and research of oral cancer, based on the correct and useful medical information of clinical, surgical, pathological, and imaging findings accumulated from individual patients at various institutions. Our general rules were revised as the UICC was revised for the 8th edition and were published as the Japanese second edition in 2019. In this paper, the English edition of the “Rules” section is primarily presented.

Introduction

Oral cancer is an integral part of head and neck cancer and is treated in accordance with the general rules for head and neck cancer. A part of the rules for managing oral cancer overlaps with the “General Rules for Clinical and Pathological Studies on head and neck cancer” published in 2018 (6th edition, Tokyo, Kanehara & Co. Ltd.), which can be said to differ from the general rules for cancers of other organs. However, the oral cavity is unique, since it contains the tongue, mandible, and teeth, with corresponding multiple and diverse functions such as swallowing, articulation, occlusion, and mastication. Moreover, the placement of various importance structures, such as nerves, blood vessels, and major salivary gland ducts is responsible for the anatomical complexity of the oral cavity. Therefore, we authored the “General Rules for Clinical and Pathological Studies on Oral Cancer” [1].

These rules were formulated, in principle, on the basis of the UICC and WHO classifications, but were partially revised when revision was considered necessary, and were proposed as a draft by the Japanese Society of Oral Oncology. We have devised detailed and highly accurate rules for the management of oral cancer, in order to overcome these problems. We referred to the contents of the general rules for head and neck cancer to ensure consistency for both rules.

Our general rules were revised as the UICC was revised for the 8th edition and were published as the second edition in Japanese in 2019 [2]. The revision consisted of 3 parts, i.e., the rules, explanations, and references, totaling 169 pages. In this paper, the English edition of the “Rules” section is primarily presented because of a limitation of space.

Objectives

In order to enable people handling oral cancer in various positions to be able to conduct diagnosis, treatment, and research uniformly, the standardization of basic concepts and specific methods for their handling is necessary. The
