Symphony For The Dev:

The Impact of Music on Human Development and Well-Being Michele Biasutti, Graham F. Welch, Jennifer MacRitchie, Gary E. McPherson, Evangelos Himonides, 2020-07-17 Music is one of the most universal ways of expression and communication in human life and is present in the everyday lives of people of all ages and from all cultures around the world. Music represents an enjoyable activity in and of itself but its influence goes beyond simple amusement. Listening to music, singing, playing, composing and improvising individually and collectively are common activities for many people. These activities not only allow the expression of personal inner states and feelings but also can bring many positive effects to those who engage in them. There is an increasing wealth of literature concerning the wider benefits of musical activity and research in the sciences associated with music suggests that there are many dimensions of human life physical, social, psychological including cognitive and emotional which can be affected positively by music. The impact that musical activity has on human life can be found in different processes including a transfer of learning from the musical to another cognitive domain. Abilities that have been developed through music education and training may also be effectively applied in other cognitive tasks. Engagement in successful music activity may also have a positive impact on social skills and social inclusion thus supporting the participation of the individual in collective and collaborative musical events. The promotion of social participation through music can foster many kinds of inclusion including intercultural, intergenerational and support for those who are differently abled. The aim of this Research Topic is to present a diverse range of original articles that investigate and discuss in different ways the crucial role that musical activity can play in human development and well-being.

Music Therapy and Music-Based Interventions in Neurology Kerry Devlin,Kyurim Kang,Alexander Pantelyat,2024-02-16 This book synthesizes knowledge about the myriad ways music can support the physical and psychosocial needs of people living with neurological diagnoses It may be a useful tool for those working or training as music therapists as well as clinicians and

patients interested in the use of music and rhythm to address individualized healthcare goals. The editors of this book advocate for a collaborative holistic approach to the implementation of music based interventions acknowledging that different and at times conflicting approaches do exist and that different patients may require exploration of different approaches to have their needs and desires met in ways most meaningful to them. The book's many contributors embody this desire to hold space for wide ranging views on clinical practice through the ways they share their own perspectives as music therapists, neurologists, nurses, speech and language pathologists and neuroscience researchers from across the globe. Each chapter is centered around clinical work in context with a specific patient community be that a diagnosis e.g. movement disorders, shared culture e.g. autistic culture, disease stage e.g. end of life or targeted clinical need e.g. psychosocial support and/or functional performance and features a summary of available research with case examples and clinical descriptions to highlight different conceptualizations of the role of music in the care of patients with neurologic diagnoses.
