servicing procedures for individual models and provides information on component repair and overhaul    **Semiconductor**

**Design and Implementation Issues in Integrated Vehicle Electronics** John H. Hall, 2005 This major research study  
provides a fresh critical look at the way automobile electronics are and should be built Written by Silicon Valley pioneer John  
Hall this book is based on his nearly 40 years of experience in developing and producing semiconductors for the automobile  
industry and other customers Highly readable and comprehensible for even beginning students of electronics and  
semiconductor design this volume provides an in depth explanation of the factors to be considered when building vehicle  
systems Starting with a concise history of vehicle electronics Hall walks the reader through the environmental conditions  
faced by these systems and the variety of failure mechanisms that can occur Basic and advanced semiconductor issues raised  
by vehicle implementation are then discussed in detail A wide range of issues confronting designers from over marketing of  
risky features to time and cost constraints are explained Complex electronic modules from many different manufacturers are  
examined and discussed as real world case studies of good and bad design techniques Hall concludes by providing design  
recommendations that will allow vehicle electronics system developers to build much tougher devices at little or no  
incremental production cost This book is the first major work to focus on key issues emerging as major causes of safety and  
performance problems Vehicle makers increasingly seek market advantages by providing ever more capable electronics in  
their products While these features add much value to vehicles they fail in ways that are beyond the experience and  
comprehension of most technicians and accident investigators By combining decades of design experience and innovation  
with extensive research Hall has produced unique insights and explanations so engineers can prevent most or perhaps all of  
these problems John Hall is one of Silicon Valley's most prolific independent pioneers and inventors He founded Union  
Carbide's semiconductor operation in 1962 He is a founder of Interstil and Micro Power Systems He is the inventor of the  
first electronic watch first LCD digital watch first CMOS liquid crystal display hand held calculator color autofocus cameras  
among many successful commercial products He has worked for many American and foreign automakers on specific projects  
such as integrated two way radios and seat belt interlocks He is working with DoD on hardening electronics systems against  
non nuclear events    *Business Periodicals Index* ,1996
