Davies,2014-02-28 We all feel emotions and are moved to action by them Religious communities often select and foster certain emotions over others Without understanding this it is hard to grasp the way groups view the world and each other Often it is the underlying emotional pattern of a group rather than its doctrines that either divides it from or attracts it to others These issues so important in today s world are explored in this book in a genuinely interdisciplinary way by anthropologists psychologists theologians and historians of religion and in some detailed studies of well and less well known religious traditions from across the world The Host in the Machine Angela Thomas-Jones,2010-07-27 This text tackles online social networks by navigating these systems from the birth to the death of the digital self The author begins by examining the creation of a virtual identity in online networks popularized by websites such as Facebook and Myspace The book subsequently explores how the social self is intrinsic to how social cultural and professional relationships are discovered forged and maintained The text journeys through the popular criticisms of social networking such as employee time wasting bullying stalking the alleged links between social networks and suicide and the decline of a user s public image The dissonance between the performance of the virtual and non virtual selves and the offline issues that can ensue are contextualized by the social nature of these online networks The discussion of this digital life ends by addressing the intricacies of becoming web dead which explores how a user removes their identity with finality from social networks and the entire web Planning Canadian Regions Gerald Hodge,Ira M.
