Synthesis Techniques and Optimizations for Reconfigurable Systems Ryan Kastner,2002 **Synthesis Techniques and Optimizations for Reconfigurable Systems** Ryan Kastner,Adam Kaplan,Majid Sarrafzadeh,2003-10-27

Synthesis Techniques and Optimizations for Reconfigurable Systems discusses methods used to model reconfigurable applications at the system level many of which could be incorporated directly into modern compilers. The book also discusses a framework for reconfigurable system synthesis which bridges the gap between application level compiler analysis and high level device synthesis. The development of this framework discussed in Chapter 5 and the creation of application analysis which further optimize its output discussed in Chapters 7 8 and 9 represent over four years of rigorous investigation within UCLA's Embedded and Reconfigurable Laboratory ERLab and UCSB's Extensible Programmable and Reconfigurable Embedded SystemS ExPRESS Group. The research of these systems has not yet matured and we continually strive to develop data and methods which will extend the collective understanding of reconfigurable system synthesis

Dynamic Reconfigurable Architectures and Transparent Optimization Techniques Antonio Carlos Schneider Beck Fl.,Luigi Carro,2010-03-10

Dynamic Reconfigurable Architectures and Transparent Optimization Techniques presents a detailed study on new techniques to cope with the aforementioned limitations. First characteristics of reconfigurable systems are discussed in details and a large number of case studies is shown. Then a detailed analysis of several benchmarks demonstrates that such architectures need to attack a diverse range of applications with very different behaviours besides supporting code compatibility. This requires the use of dynamic optimization techniques such as Binary Translation and Trace reuse. Finally works that combine both reconfigurable systems and dynamic techniques are discussed and a quantitative analysis of one them the DIM architecture is presented
