Dendrimer-Based Drug Delivery Systems

Yiyun Cheng,2012-07-03 The opportunities and challenges of using dendrimers to improve drug delivery Among pharmaceutical and biomedical researchers the use of dendrimers in drug delivery systems has attracted increasing interest In particular researchers have noted that the volume of a dendrimer increases when it has a positive charge If this property can be applied effectively dendrimers have enormous potential in drug delivery systems directly supplying medication to targeted human organs With contributions from an international team of pioneers and experts in dendrimer research this book provides a comprehensive overview of the latest research efforts in designing and optimizing dendrimer based drug delivery systems The book analyzes key issues demonstrating the critical connections that link fundamental concepts design synthesis analytical methodology and biological assessment to the practical use of dendrimers in drug delivery applications Topics covered include Dendrimer history Synthesis Physicochemical properties Principles of drug

delivery Applications in diverse biomedical fields Dendrimer Based Drug Delivery Systems reflects the authors thorough review and analysis of the current literature as well as their own firsthand experience in the lab Readers will not only discover the current state of the science but also gain valuable insights into fruitful directions for future research References at the end of each chapter serve as a gateway to the growing body of literature in the field enabling readers to explore each individual topic in greater depth Pharmaceutical and biomedical researchers will find this book a unique and essential guide to the opportunities issues and challenges involved in fully exploiting the potential of dendrimers to improve drug delivery

Uptake and Trafficking of Protein Toxins Holger Barth,2017-12-01 This volume focuses on the transport of medically relevant bacterial protein toxins into mammalian cells and on novel pharmacological strategies to inhibit toxin uptake The first chapters review our current understanding of the cell surface receptors and cellular transport processes of Clostridium botulinum neurotoxins Clostridium botulinum C3 toxin Clostridium difficile toxins binary clostridial enterotoxins anthrax toxins and diphtheria toxin In brief specific binding transport B subunits deliver the enzyme A subunits into the cytosol where the latter modify their substrates producing cytotoxic effects and the characteristic toxin associated diseases Key mechanisms for the transport of the A subunits from endosomes into the cytosol and the role of trans membrane pores formed by the B subunits and host cell chaperones for this process are reviewed The book's closing chapters focus on compounds which inhibit the transport of the A subunits from endosomes into the cytosol and therefore might lead to novel therapeutic strategies for toxin associated diseases These substances include pharmacological inhibitors of the host cell chaperones involved as well as multivalent and heterocyclic molecules that specifically block the toxins translocation channels This volume offers an up to date resource for scientists

Handbook of Carbohydrate-Modifying Biocatalysts Peter Grunwald,2016-11-25 This book provides an actual overview of the structure function and application of carbohydrate modifying biocatalysts Carbohydrates have been disregarded for a long time by the scientific community mainly due to their complex structure Meanwhile the situation changed with increasing knowledge about the key role carbohydrates play in biological processes such as recognition signal transduction immune responses and

others An outcome of research activities in glycoscience is the development of several new pharmaceuticals against serious diseases such as malaria cancer and various storage diseases Furthermore the employment of carbohydrate modifying biocatalysts enzymes as well as microorganisms will contribute significantly to the development of environmentally friendly processes boosting a shift of the chemical industry from petroleum to bio based production of chemicals from renewable resources The updated content of the second edition of this book has been extended by discussing the current state of the art of using recombinantly expressed carbohydrate modifying biocatalysts and the synthesis of minicellulosomes in connection with consolidated bioprocessing of lignocellulosic material Furthermore a synthetic biology approach for using DAHP dependent aldolases to catalyze asymmetric aldol reactions is presented
