

The image shows a complete gaming workstation. The monitor displays the Civilization VII title screen, which includes the Sid Meier's logo and a stylized map of the world. The PC tower is a mid-tower case with a transparent side panel, revealing internal components like the motherboard, RAM, and a large blue fan. The tower is illuminated with blue and purple RGB lights. In the foreground, there is a black keyboard with white keys and a black mouse with a blue light. The overall aesthetic is modern and tech-oriented.

Technological Systems and Industrial Dynamics B. Carlsson, 2013-12-01 This volume constitutes a summary of several years multi disciplinary research by a group of Swedish researchers The project Sweden s Technological Systems and Future Development Potential was initiated by the Swedish National Board for Industrial and Technical Development NUTEK and has been carried out at the Department of Industrial Management and Economics at Chalmers University of Technology in Gothenburg the Research Policy Institute at the University of Lund the Industrial Institute for Economic and Social Research IUI in Stockholm and the Department of Industrial Economics and Management at the Royal Institute of Technology Stockholm under the direction of Bo Carlsson Case Western Reserve University Cleveland Ohio The project group decided early on to focus first on the technological system for factory automation a relatively mature system of great importance to Swedish industry and in which Sweden has reached a leading position internationally and then to shift the attention to other systems in various stages of development and with varying Swedish strength The work on factory automation resulted in numerous papers and publications summarized in a volume published in 1995 *Technological Systems and Economic Performance The Case of Factory Automation* ed Bo Carlsson Dordrecht *Users & Machine Learning-based Curation Systems* Hendrik Heuer, 2020-09-03 Users are increasingly interacting with machine learning ML based curation systems YouTube and Facebook two of the most visited websites worldwide utilize such systems to curate content for billions of users Contemporary challenges such as fake news filter bubbles and biased predictions make the understanding of ML based curation systems an important and timely concern Despite their political social and cultural importance practitioners framing of machine learning and users understanding of ML based curation systems have not been investigated systematically This is problematic since machine learning as a novel programming paradigm in which a mapping between input and output is inferred from data poses a variety of open research questions regarding users understanding The first part of this thesis provides the first in depth investigation of ML based curation systems as socio technical systems The second part of the thesis contributes recommendations on how ML based curation systems can and should be explained and audited The first part analyses practitioners framing of ML by examining how the term machine learning ML applications and ML algorithms are framed in tutorials The thesis also investigates the beliefs that users have about YouTube and introduces a user belief framework of ML based curation systems Furthermore it demonstrates how limited users capabilities for providing input data for ML based curation systems are The second part evaluates different explanations of ML based systems This evaluation uncovered an explanatory gap between what is available to explain ML based curation systems and what users need to understand such systems Informed by this explanatory gap the second part of this thesis demonstrates that audits of ML systems can be an important alternative to explanations This demonstration of audits also uncovers a popularity bias enacted by YouTube s ML based curation system Based on these findings the thesis recommends performing audits to ensure that ML

Equity and Quality Dimensions in Educational Effectiveness

Leonidas Kyriakides,Bert Creemers,Evi Charalambous,2018-01-03 This book aims to make a contribution to the theory research and practice on quality and equity in education by providing a comprehensive overview of these two dimensions of educational effectiveness and proposing a methodological instrument that may be used to measure the contribution that each school can make to promoting equity The importance of using this instrument is demonstrated by analysing results of various effectiveness studies conducted over the last decade The book draws upon research across the world especially research conducted in the Europe the United States and Australasia It is shown that promoting equity has no negative effect on the promotion of quality The importance of using this methodological instrument to identify factors that promote both quality and equity at different educational levels i e teacher school and educational system is stressed The book also demonstrates how we can measure stability and changes in the effectiveness status of schools over time in terms of fostering quality and equity In addition it underlines the importance of identifying factors measuring changes in the effectiveness status of schools in terms of equity and points to the alternative strategies that can be used at school and system level In our attempt to encourage the further development and use of this methodology for school improvement purposes we demonstrate how experimental studies can be conducted to discover whether and under which conditions the proposed methodology can help schools promote both quality and equity Finally implications for school evaluation research educational policy and practice are drawn In this way the book contributes significantly to the debate on how quality and equity can be achieved and encourages policy makers and practitioners not to view these two dimensions of effectiveness as being in competition with each other but as constituting the major objectives of any reform policy and or improvement effort at school and or national levels
