## Systems Of Microdifferential Equations:

**Systems of Microdifferential Equations** Masaki Kashiwara,1983 This volume is based on notes from a graduate course given by the author at the University of Paris The field of microdifferential equations to which the author has made substantial contributions is an active area of mathematical research with applications to real and complex analysis Lie groups algebraic geometry the topology of algebraic varieties and mathematical physics Feynman amplitudes The volume will be of interest to graduate students and research mathematicians alike    **Fundamentals of Algebraic Microlocal Analysis** Goro Kato,Daniele C Struppa,2020-08-11 Provides a thorough introduction to the algebraic theory of systems of differential equations as developed by the Japanese school of M Sato and his colleagues Features a complete review of hyperfunction microfunction theory and the theory of D modules Strikes the perfect balance between analytic and algebraic aspects

*Systems of Microdifferential Equations of Infinite Order* T. Kawai,1984    *Structure Of Solutions Of Differential Equations* Takahiro Kawai,1996-04-25 A collection of papers on current topics and future problems in the theory of differential equations which were reported at the Taniguchi symposium Katata and RIMS symposium Kyoto Painlevé transcendent Borel resummation linear differential equations of infinite order solvability of microdifferential equations Gevrey index etc are among them

**Microdifferential Systems in the Complex Domain** P. Schapira,2012-12-06 The words microdifferential systems in the complex domain refer to several branches of mathematics micro local analysis linear partial differential equations algebra and complex analysis The microlocal point of view first appeared in the study of propagation of singularities of differential equations and is spreading now to other fields of mathematics such as algebraic geometry or algebraic topology How ever it seems that many analysts neglect very elementary tools of algebra which forces them to confine themselves to the study of a single equation or particular square matrices or to carry on heavy and non intrinsic formula tions when studying more general systems On the other hand many algebraists ignore everything about partial differential equations such as for example the Cauchy problem although it is a very natural and geometri cal setting of inverse image Our aim will be to present to the analyst the algebraic methods which naturally appear in such problems and to make available to the algebraist some topics from the theory of partial differential equations stressing its geometrical aspects Keeping this goal in mind one can only remain at an elementary level

**D-Modules and Microlocal Geometry**  
Masaki Kashiwara,Teresa Monteiro Fernandes,Pierre Schapira,2011-06-15 The series is aimed specifically at publishing peer reviewed reviews and contributions presented at workshops and conferences Each volume is associated with a particular conference symposium or workshop These events cover various topics within pure and applied mathematics and provide up to date coverage of new developments methods and applications    *“Aœ desingularization theorem for systems of microdifferential equations* Orlando Neto,1991    *Algebraic Study of Systems of Partial Differential Equations* Masaki Kashiwara,1995    *Foundations of Algebraic Analysis (PMS-37), Volume 37* Masaki Kashiwara,Takahiro Kawai,Tatsuo

Kimura,2017-03-14 The use of algebraic methods for studying analysts is an important theme in modern mathematics The most significant development in this field is microlocal analysis that is the local study of differential equations on cotangent bundles This treatise provides a thorough description of microlocal analysis starting from its foundations The book begins with the definition of a hyperfunction It then carefully develops the microfunction theory and its applications to differential equations and theoretical physics It also provides a description of microdifferential equations the microlocalization of linear differential equations Finally the authors present the structure theorems for systems of microdifferential equations where the quantized contact transformations are used as a fundamental device The microfunction theory together with the quantized contact transformation theory constitutes a valuable new viewpoint in linear partial differential equations Originally published in 1986 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 *Hyperbolic Equations and Related Topics* Shigeru Mizohata,1986

**Toward the Exact WKB Analysis of Differential Equations, Linear or Non-Linear** Christopher J. Howls, 1989, 1990, 2000 *Reviews in Partial Differential Equations, 1980-86, as Printed in Mathematical Reviews*, 1988 [Princeton Mathematical Series](#), 1986 *Singularities and Differential Equations* Stanisław Janeczko, Wojciech M. Zajączkowski, Bogdan Ziemian, 1996 **Sūgaku Expositions**, 1996 [Publications of the Research Institute for Mathematical Sciences](#), 1994 **Around Microlocal Analysis** J. M. Bony, 2003 *Differential Equations and Exact WKB Analysis*, 2008 [Publications of the Research Institute for Mathematical Sciences](#), 2001 **Conical Refraction and Higher Microlocalization** Otto Liess, 2006-11-15 The main topic of the book is higher analytic microlocalization and its application to problems of propagation of singularities The part on higher microlocalization could serve as an introduction to the subject The results on propagation refer to solutions of linear partial differential operators with characteristics of variable multiplicity and are of conical refraction type The relation and interplay between these results and results or constructions from geometrical optics in crystal theory is discussed with many details The notes are written foremost for researchers working in microlocal analysis but it is hoped that they can also be of interest for mathematicians and physicists who work in propagation phenomena from a more classical point of view
