Energy Research Abstracts ,1990 Research Handbook on Intellectual Property and the Life Sciences Duncan

Matthews, Herbert Zech, 2017-06-30 Intellectual property IP is a key component of the life sciences one of the most dynamic and innovative fields of technology today. At the same time the relationship between IP and the life sciences raises new public policy dilemmas. The Research Handbook on Intellectual Property and the Life Sciences comprises contributions by leading experts from academia and industry to provide in depth analyses of key topics including pharmaceuticals, diagnostics and genes. Plant innovations, stem cells, the role of competition law and access to medicines. The Research Handbook focuses on the relationship between IP and the life sciences in Europe and the United States, complemented by country specific case studies on Australia, Brazil, China, India, Japan, Kenya, South Africa and Thailand to provide a truly international perspective.

Handbook of Environmental Psychology and Quality of Life Research Ghozlane Fleury-Bahi, Enric Pol, Oscar Navarro, 2016-08-12 This Handbook presents a broad overview of the current research carried out in environmental psychology which puts into perspective quality of life and relationships with living spaces and shows how this original analytical framework can be used to understand different environmental and societal issues. Adopting an original approach this Handbook focuses on the links with other specialties in psychology especially social and health psychology together with other disciplines such as geography, architecture, sociology, anthropology, urbanism and engineering. Faced with the problems of society which involve the quality of life of individuals and communities it is fundamental to consider the relationships an individual has with his different living spaces. This issue of the links between quality of life and environment is becoming increasingly significant with at a local level problems resulting from different types of annoyances such as pollution and noise while at a global level there is the central question of climate change with its harmful consequences for humans and the planet. How can the impact on well-being of environmental nuisances and threats for example natural risks, pollution and noise be reduced? How can the quality of life within daily living spaces (home, cities, work environments) be improved? Why is it important to understand the psychological issues of our relationship with the global environment, climatic warming, ecological behaviours? This Handbook is intended not only for students of various disciplines (geography, architecture, psychology, town planning, etc.) but also for social decision makers and players who will find in it both theoretical and methodological perspectives so that psychological and environmental dimensions can be better taken into account in their working practices.
