Recent Investigations of Ergot Alkaloids Incorporated into Plant and/or Animal Systems

Darrin Smith, James Levi Klotz, 2015-07-01 Ergot alkaloids produced by fungi have a basic chemical structure but different chemical moieties at substituent sites result in various forms of alkaloids that are distinguishable from one another Since the ergoline ring structure found in ergot alkaloids is similar to that of biogenic amines neurotransmitters a variety of physiological effects can result after ingestion Research involving ergot alkaloids is an increasing important global issue as more governments pass laws that limit permissible levels of ergot alkaloids in both foodstuffs and feedstuffs Regardless of whether these compounds are found directly in foodstuffs or in feed plants given to forage animals i.e. cattle, horses, sheep and goats introduction of these compounds can complicate the food supply In addition toxicosis resulting from alkaloids can be a costly hindrance with mounting annual production losses associated with forage animal production systems that impact other agricultural and food based industries Recent advances for the analysis of these compounds in different matrices as well as the understanding the role these compounds play in distinct biological pathways have begun to help address the issue This Research Topic Recent Investigations of Ergot Alkaloids Incorporated into Plant and or Animal Systems has developed a

Intra- and inter-species interactions in microbial communities Luis Raul Comolli, Birgit Luef, Manfred Auer, 2015-03-03 Recent developments in various OMICs fields have revolutionized our understanding of the vast diversity and ubiquity of microbes in the biosphere However most of the current paradigms of microbial cell biology and our view of how microbes live and what they are capable of are derived from in vitro experiments on isolated strains Even the co culturing of mixed species to interrogate community behavior is relatively new But the majority of microorganisms lives in complex communities in natural environments under varying conditions and often cannot be cultivated Unless we obtain a detailed understanding of the near native 3D ultrastructure of individual community members the 3D spatial community organization their metabolic interdependences coordinated gene expression and the spatial organization of their macromolecular machines inventories as well as their communication strategies we won't be able to truly understand microbial community life How spatial and also temporal organization in cell cell interactions are achieved remains largely elusive For example a key question in microbial ecology is what mechanisms microbes employ to respond when faced with prey competitors or predators and changes in external factors Specifically to what degree do bacterial cells in biofilms act individually or with coordinated responses What are the spatial extent and coherence of coordinated responses In addition networks linking organisms across a dynamic range of physical constraints and connections should provide the basis for linked evolutionary changes under pressure from a changing environment Therefore we need to investigate microbial responses to altered or adverse environmental conditions including phages predators and competitors and their
