## **The First Of Measurement:**

*First Measurement of Neutrino and Antineutrino Oscillation at T2K* Kirsty Elizabeth Duffy, 2017-09-13 This thesis reports the measurement of muon neutrino and antineutrino disappearance and electron neutrino and antineutrino appearance in a muon neutrino and antineutrino beam using the T2K experiment It describes a result in neutrino physics that is a pioneering indication of charge parity CP violation in neutrino oscillation the first to be obtained from a single experiment Neutrinos are some of the most abundant but elusive particles in the universe and may provide a promising place to look for a potential solution to the puzzle of matter antimatter imbalance in the observable universe It has been firmly established that neutrinos can change flavour or oscillate as recognised by the 2015 Nobel Prize The theory of neutrino oscillation allows for neutrinos and antineutrinos to oscillate differently CP violation and may provide insights into why our universe is matter dominated Bayesian statistical methods including the Markov Chain Monte Carlo fitting technique are used to simultaneously optimise several hundred systematic parameters describing detector beam and neutrino interaction uncertainties as well as the six oscillation parameters Code of Federal Regulations United States.
