The Fate Of Knowledge:

The Fate of Knowledge Helen E. Longino, 2018-06-05 Helen Longino seeks to break the current deadlock in the ongoing wars between philosophers of science and sociologists of science academic battles founded on disagreement about the role of social forces in constructing scientific knowledge. While many philosophers of science downplay social forces claiming that scientific knowledge is best considered as a product of cognitive processes, sociologists tend to argue that numerous noncognitive factors influence what scientists learn, how they package it, and how readily it is accepted. Underlying this disagreement however is a common assumption that social forces are a source of bias and irrationality. Longino challenges this assumption, arguing that social interaction actually assists us in securing firm, rationally based knowledge. This important insight allows her to develop a durable and novel account of scientific knowledge that integrates the social and cognitive. Longino begins with a detailed discussion of a wide range of contemporary thinkers who write on scientific knowledge, clarifying the philosophical points at issue. She then critically analyzes the dichotomous understanding of the rational and the social that characterizes both sides of the science studies stalemate and the social account that she sees as necessary for an epistemology of science that includes the full spectrum of cognitive processes. Throughout her account is responsive both to the normative uses of the term knowledge and to the social conditions in which scientific knowledge is produced. Building on ideas first advanced in her influential book *Science as Social Knowledge*, Longino brings her account into dialogue with current work in social epistemology and science studies and shows how her critical social approach can help solve a variety of stubborn problems. While the book focuses on epistemological concerns related to the sociality of inquiry, Longino also takes up its implications for scientific pluralism. The social approach she concludes best allows us to retain a meaningful concept of knowledge in the face of theoretical plurality and uncertainty.

Decolonizing and Indigenizing Visions of Educational Leadership Njoki N. Wane, Kimberly L. Todd, Coly Chau, Heather Watts, 2022-11-21 This edited collection centres the reclamation of global counter and Indigenous knowledges, epistemologies, ontologies, axiologies, and cosmovisions that have the capacity to create new educational leadership frameworks that chart courses to visions beyond the current oppressive systems of education.

The Materiality of Learning Estrid Sørensen, 2009-04-27 The field of educational research lacks a methodology for the study of learning that does not begin with humans, their aims and their interests. The Materiality of Learning seeks to overcome this human centered mentality by developing a novel spatial approach to the materiality of learning. Drawing on science and technology studies (STS), Estrid Sørensen compares an Internet based 3D virtual environment project in a fourth grade class with the class's work with traditional learning materials including blackboards, textbooks, notebooks, pencils, and rulers. Taking into account pupils and teachers' physical bodies, Professor Sørensen analyzes the multiple forms of technology, knowledge, and presence that are enacted with the materials. Featuring detailed ethnographic descriptions and useful end-of-chapter summaries, this book is an important reference for professionals.
