Promise and Challenges in Systems Microbiology National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Evonne Tang, Patricia McAdams, 2004-04-04 Microbiologists have become interested in applying systems biology to understand and harness complex biological processes in microbial communities A systems approach which attempts to use comparative high throughput assays and mathematical or computational models has been used to generate a picture of system wide activity that can yield insight into processes operating within a single cell But the concept of integrating advances in genomics proteomics and metabolomics and incorporating them into mathematical models can also be applied to microbial ecosystems which typically occur in consortia of related and unrelated organisms Research on microbial communities using a system based approach could provide a broader perspective on controls on biological processes and how they operate in and among microorganisms The National Academies of Sciences Engineering and Medicine held a workshop on Progress and Promises of Systems Microbiology in August 2003 with the intent of providing a forum for discussion of the tools technology and programs that are needed to advance the study of microorganisms through a systems approach Participants also discussed ways to encourage collaboration among scientists of different disciplines This report summarizes the presentations and discussions from the workshop
