Design Computing will help you understand the rapidly evolving relationship between computing designers and the many different environments they create or work in. The book introduces the topic of design computing and covers the basics of hardware and software so you don't need to be an expert. Topics include the fundamentals of digital representation, programming and interfaces for design, the shifting landscape of opportunity and expectation in practice and pedagogy, placing sensors in buildings to measure performance and the challenge of applying information effectively in design. The book also includes additional reading for those who wish to dig deeper into the subject. Design Computing will provide you with a greater awareness of the issues that permeate the field, opportunities for you to investigate and perhaps motivation to push the boundaries.

**Crossing Design Boundaries** Paul Rodgers, Libby Brodhurst, Duncan Hepburn, 2006-02-01 This book presents over 100 papers from the 3rd Engineering Product Design Education International Conference dedicated to the subject of exploring novel approaches in product design education. The theme of the book is Crossing Design Boundaries which reflects the editors' wish to incorporate many of the disciplines associated with and integral to modern product design and development pursuits. Crossing Design Boundaries covers, for example, the conjunction of anthropology and design, the psychology of design products, the application of soft computing in wearable products and the utilisation of new media and design and how these can be best exploited within the current product design arena. The book includes discussions concerning product design education and the cross over into other well established design disciplines such as interaction design, jewellery design, furniture design and exhibition design which have been somewhat under represented in recent years. The book comprises a number of sections containing papers which cover highly topical and relevant issues including Design Curriculum Development, Interdisciplinarity, Design Collaboration and Team Working, Philosophies of Design Education, Design Knowledge, New Materials and New Technologies in Design, Design Communication, Industrial Collaborations and Working with Industry, Teaching and Learning Tools and Design Theory.
