Experimental investigation of relevant road surface descriptors for tire-road noise measurements on low-absorbing road surfaces Pinay, Julien, 2024-01-16 Ihrer Arbeit in der Originalsprache This work aims at identifying relevant road surface characteristics to mitigate tire road noise of free rolling tires using a systematic approach As using open porous roads is already known as an efficient measure to reduce tire rolling noise this study will focus on compact road surfaces which have a low acoustic absorption Measurements on standardized ISO 10844 test tracks and on public roads are used to study the norm s representativity and its completeness *The New Cool* Neal

Bascomb, 2011-03-01 That Monday afternoon in high school gyms across America kids were battling for the only glory American culture seems to want to dispense to the young these days sports glory But at Dos Pueblos High School in Goleta California in a gear cluttered classroom a different type of cool was brewing A physics teacher with a dream the first public high school teacher ever to win a MacArthur Genius Award had rounded up a band of high I Q students who wanted to put their technical know how to work If you asked these brainiacs what the stakes were that first week of their project they d have told you it was all about winning a robotics competition building the ultimate robot and prevailing in a machine to machine contest in front of 25 000 screaming fans at Atlanta s Georgia Dome But for their mentor Amir Abo Shaeer much more hung in the balance The fact was Amir had in mind a different vision for education one based not on rote learning on absorbing facts and figures but on active creation In his mind s eye he saw an even more robust academy within Dos Pueblos that would make science technology engineering and math STEM cool again and he knew he was poised on the edge of making that dream a reality All he needed to get the necessary funding was one flashy win a triumph that would firmly put his Engineering Academy at Dos Pueblos on the map He imagined that one day there would be a nation filled with such

academies and a new popular veneration for STEM a new cool that would return America to its former innovative glory It was a dream shared by Dean Kamen a modern day inventing wizard often called the Edison of his time who d concocted the very same FIRST Robotics Competition that had lured the kids at Dos Pueblos Kamen had created FIRST For Inspiration and Recognition of Science and Technology nearly twenty years prior And now with a participant alumni base approaching a million strong he felt that awareness was about to hit critical mass But before the Dos Pueblos D Penguin engineers could do their part in bringing a new cool to America they d have to vanquish an intimidating lineup of super teams high school technology goliaths that hailed from engineering hot spots such as Silicon Valley Massachusetts Route 128 technology corridor and Michigan s auto design belt Some of these teams were so good that winning wasn t just hoped for every year it was expected In The New Cool Neal Bascomb manages to make even those who know little about or are vaguely suspicious of technology care passionately about a team of kids questing after a different kind of glory In these kids heartaches and headaches and yes high five triumphs we glimpse the path not just to a new way of educating our youth but of honoring the crucial skills a society needs to prosper A new cool

Computational Fluid and Solid Mechanics K.J. Bathe,2001-05-21 The MIT mission to bring together Industry and Academia and to nurture the next generation in computational mechanics is of great importance to reach the new level of mathematical modeling and numerical solution and to provide an exciting research environment for the next generation in computational mechanics Mathematical modeling and numerical solution is today firmly established in science and engineering Research conducted in almost all branches of scientific investigations and the design of systems in practically all disciplines of engineering can not be pursued effectively without frequently intensive analysis based on numerical computations The world we live in has been classified by the human mind for descriptive and analysis purposes to consist of fluids and solids continua and molecules and the analyses of fluids and solids at the continuum and molecular scales have traditionally been pursued separately Fundamentally however there are only molecules and particles for any material that interact on the microscopic and macroscopic scales Therefore to unify the analysis of physical systems and to reach a deeper understanding of the behavior of nature in scientific investigations and of the behavior of designs in engineering endeavors a new level of analysis is necessary This new level of mathematical

modeling and numerical solution does not merely involve the analysis of a single medium but must encompass the solution of multi physics problems involving fluids solids and their interactions involving multi scale phenomena from the molecular to the macroscopic scales and must include uncertainties in the given data and the solution results Nature does not distinguish between fluids and solids and does not ever repeat itself exactly This new level of analysis must also include in engineering the effective optimization of systems and the modeling and analysis of complete life spans of engineering products from design to fabrication to possibly multiple repairs to end of service
