Sleep And Cognition:

Human Sleep and Cognition, 2010-11-26 Human Sleep and Cognition Sleep and cognition in the elderly Géraldine Rauchs, Julie Carrier, Philippe Peigneux, 2015-05-26 Understanding the role of sleep and the mechanisms at play in ageing are among the most exciting challenges in neuroscience. Although our understanding of the mechanisms governing sleep stages and their role in cognitive processes including memory functions is gradually increasing, most of the currently available data have been gathered in young adults. Still, substantial physiological changes in sleep are observed with increasing age that may markedly impact on daily functioning. This is why this Research Topic focuses on our current understanding of the impact of age-related changes in sleep architecture on various domains of cognition. The three editors: Julie Carrier, Montréal, Canada; Philippe Peigneux, Brussels, Belgium; and Géraldine Rauchs, Caen, France, are specialized in various fields of sleep research. Here they bring together an outstanding group of neuroscientists and clinical investigators engaged in the study of sleep, encompassing state-of-the-art studies of sleep disorders such as sleep apnoea or REM sleep behaviour disorder, studies assessing new treatments to improve sleep quality together with experts in various domains of cognition such as vigilance, memory, and dreams, in a perspective aimed at offering the interested reader a comprehensive view of the impact of age-related changes in sleep architecture on cognition. *Human Sleep and Cognition, Part II*, 2011-05-16 There is a critical bidirectional relationship between sleep and cognition, yet the literature in this area is scattered and it is surprisingly difficult to find a comprehensive overview of the basic principles, latest discoveries, and outstanding challenges. This issue of *Progress in Brain Research* is split over 2 volumes bringing together cutting-edge research on the topic in the basic clinical and applied sciences. The 2 volumes review current knowledge and understanding, provide a starting point for researchers and practitioners entering the field, and build a platform for further research and discovery. Leading authors review the state of the art in their field of investigation and provide their views and perspectives for future research. Chapters are extensively referenced to provide readers with a comprehensive list of resources on the topics covered. All chapters include comprehensive background information and are written in a clear form that is also accessible to the non-specialist. *Sleep and Cognition* Richard R. Bootzin, John F. Kihlstrom, 1990-01-01 Despite impressive advances in understanding sleep as a biological phenomenon and in understanding the nature of mental processes in the normal waking state, our knowledge of mental life during sleep remains extremely impoverished. The common identification of cognition with consciousness leaves the impression that little or no mental activity occurs during sleep. The present volume represents the Proceedings of the Arizona Conference on Sleep and Cognition held in Tucson, January 19-22, 1989. A principal concern of the conference was the implications of recent work on implicit memory and other aspects of information processing outside of awareness for studies of cognitive processes during sleep and the role of the sleep laboratory as a vehicle for studying various aspects of information processing outside of awareness in the absence of the active deployment of attention. To this end, selected

investigators in the area of sleep who have an interest in cognitive processes were brought together with their counterparts in the area of cognition who have an interest in sleep We hope that one outcome of this meeting and publication of the Proceedings will be a new agenda for research on sleep that will carry investigators of both camps well into the 21st century
