Multilingual Perspectives on Child Language Disorders Janet L. Patterson, Barbara L. Rodríguez, 2016-01-05 This book investigates language disorders in children who speak languages other than or in addition to English. The chapters in the first section of the volume focus on language disorders associated with four different syndromes in multilingual populations and contexts. This section discusses language disorders associated with autism spectrum disorders, Down syndrome, fetal alcohol syndrome, and Williams syndrome. The chapters in the second section of the book relate to language impairment in children who speak diverse languages, although the issues they address are relevant across languages and cultural contexts. The book also reviews assessment procedures and intervention approaches for diverse languages, including Bengali, Cantonese, French, Spanish, and Turkish. The volume aims to stimulate thoughtful clinical practice and further research in language disorders in multilingual populations.

*Educating Second Language Children* Fred Genesee, 1994-03-25 This text brings together the work of 15 elementary education experts who support an integrative approach to educating second language children. The paperback edition is a collection of articles from fourteen elementary education experts who espouse an integrative approach to second language education, one that goes beyond language teaching methodology to cover a wide range of issues affecting the academic and social success of language minority children. The volume deals not only with second language development but with the development of the whole child. Rather than focusing on language instruction, it addresses the entire curriculum and instead of restricting itself to classroom learning, it examines the role of the school, family, and

community **Children's Language and Communication Difficulties** Julie Dockrell, 1999-06-03 Children's language difficulties affect many areas of functioning and development. Since most children with these difficulties are expected to function in ordinary schools and nurseries it is important that parents, teachers and practitioners have a broad understanding of the issues. Language and communication problems typically fall under the umbrella terms language disability, language delay or language difficulties. They can range from an occasional difficulty with certain sounds to an inability to communicate using spoken language. These problems can occur in isolation or be associated with a range of special needs such as hearing loss, visual impairment or learning disabilities. This is the first introductory text to outline the difficulties experienced by children and link these to issues surrounding multidisciplinary assessment, intervention and service provision. Children's Language and Communication Difficulties offers professionals and parents an up to date account of the developmental language problems that children experience, the provision available to meet the child's needs, the long term impact of language difficulties. The authors examine the problems of identification and diagnosis and explore the range of physical and cognitive disabilities associated with language problems. They have also looked closely at alternative forms of communication and have provided the reader with discussion and evaluation of recently developed intervention techniques.

**Phonological Encoding and Monitoring in Normal and Pathological Speech** Robert J. Hartsuiker, 2005 This book reports recent research on mechanisms of normal formulation and control in speaking and in language disorders such as stuttering, aphasia and verbal dyspraxia. The theoretical claim is that such disorders result both from deficits in a component of the language production system and interactions between this component and the system that monitors for errors and undertakes a corrective behaviour. In particular the book focuses on phonological encoding in speech, the construction of a phonetic plan for utterances, on verbal self monitoring, checking for correctness and initiating corrective action if necessary, and on interactions between these processes. Bringing together sixteen original chapters by leading international researchers this volume represents a coherent statement of current thinking in this exciting field. The aim is to show how psycholinguistic models of normal speech processing can be applied to the study of impaired speech production. This book will prove invaluable to any researcher, student or speech therapist looking to bridge the gap between the latest advances in theory and the implications of these advances for language and speech pathology.

**Encyclopedia of Language Development** Patricia J. Brooks, Vera Kempe, 2014-03-28 The progression from newborn to sophisticated language user in just a few short years is often described as wonderful and miraculous. What are the biological, cognitive and social underpinnings of this miracle? What major language development milestones occur in infancy? What methodologies do researchers employ in studying this progression? Why do some become adept at multiple languages while others face a lifelong struggle with just one? What accounts for declines in language proficiency and how might such declines be moderated? Despite an abundance of textbooks, specialized monographs and a couple of academic handbooks there has been no encyclopedic reference work in this area until now. The Encyclopedia

of Language Development covers the breadth of theory and research on language development from birth through adulthood as well as their practical application. Features This affordable A to Z reference includes 200 articles that address such topic areas as theories and research tradition, biological perspectives, cognitive perspectives, family, peer and social influences, bilingualism, special populations and disorders, and more. All articles signed and authored by key figures in the field conclude with cross reference links and suggestions for further reading. Appendices include a Resource Guide with annotated lists of classic books and articles, journals, associations and web sites, a Glossary of specialized terms and a Chronology offering an overview and history of the field. A thematic Reader's Guide groups related articles by broad topic areas as one handy search feature on the e Reference platform which includes a comprehensive index of search terms. Available in both print and electronic formats, Encyclopedia of Language Development is a must have reference for researchers and is ideal for library reference or circulating collections.

**Art of Talking with Children** Rebecca Rolland, 2022-03-01. From a Harvard faculty member and oral language specialist, an invaluable guide that gives readers evidence based tools and techniques to communicate more effectively with children in ways that let them foster relationships with less conflict and more joy and kindness. Science has shown that the best way to help our kids become independent, confident, kind, empathetic and happy is by talking with them. Yet so often parents, educators and caregivers have trouble communicating with kids. Conversations can feel trivial or strained or worse, are marked by constant conflict. In *The Art of Talking with Children*, Rebecca Rolland, a Harvard faculty member, speech pathologist and mother arms adults with practical tools to help them have productive and meaningful conversations with children of all ages, whether it's engaging an obstinate toddler or getting the most monosyllabic adolescent to open up. *The Art of Talking with Children* shows us how quality communication or rich talk can help us build the skills and capacities children need to thrive.

**Talking and Learning with Young Children** Michael Jones, 2015-11-18. Children learn to talk through interaction, including involvement in many thousands of conversations with adults and other children. These conversations provide the framework for exploring relationships, understanding the world and learning in its widest sense. This book explores how children learn to communicate using language, how they use language to learn and the role of adults in the process. It examines how adults can support children to learn by involving them in positive interactions, meaningful conversation and by helping them play, explore and talk with each other. The book includes examples of children and adults talking and learning together, case studies of successful approaches that support language and learning in early years settings, points for reflection and practical tasks. Informed by the author's own experience working with young children, families and practitioners and from his involvement in the England wide Every Child a Talker (ECaT) project, it links key research findings with successful practice to inspire practitioners to develop skills when talking with children.
