## **Spectral Methods In Infinite Dimensional Analysis:**

Spectral Methods in Infinite-Dimensional Analysis Yu.M. Berezansky, Y.G. Kondratiev, 2013-06-29 The Russian edition of this book appeared 5 years ago Since that time many results have been improved upon and new approaches to the problems investigated in the book have appeared But the greatest surprise for us was to discover that there exists a large group of mathematicians working in the area of the so called White Noise Analysis which is closely connected with the essential part of our book namely with the theory of generalized functions of infinitely many variables The first papers dealing with White Noise Analysis were written by T Hida in Japan in 1975 Later this analysis was developed intensively in Japan Germany U S A Taipei and in other places The related problems of infinite dimensional analysis have been studied in Kiev since 1967 and the theory of generalized functions of infinitely many variables has been investigated since 1973 However due to the political system in the U S S R contact between Ukrainian and foreign mathematicians was impossible for a long period of time This is why to our great regret only at the end of 1988 did one of the authors meet L Streit who told him about the existence of White Noise Analysis And it became clear that many results in these two theories coincide and that in fact there exists a single theory and not two distinct ones Spectral methods in infinite-dimensional analysis. 1 (1995) I.I. Kondratiev, 2012-11-10 The Russian edition of this book appeared 5 years ago Since that time many results have been improved upon and new approaches to the problems investigated in the book have appeared But the greatest surprise for us was to discover that there exists a large group of mathematicians working in the area of the so called White Noise Analysis which is closely connected with the essential part of our book namely with the theory of generalized functions of infinitely many variables The first papers dealing with White Noise Analysis were written by T Hida in Japan in 1975 Later this analysis was developed intensively in Japan Germany U S A Taipei and in other places The related problems of infinite dimensional analysis have been studied in Kiev since 1967 and the theory of generalized functions of infinitely many variables has been investigated since 1973 However due to the political system in the U S S R contact between Ukrainian and foreign mathematicians was impossible for a long period of time This is why to our great regret only at the end of 1988 did one of the authors meet L Streit who told him about the existence of White Noise Analysis And it became clear that many results in these two theories coincide and that in fact there exists a single theory and not two distinct ones **The Method of Rigged Spaces in Singular Perturbation Theory of Self-Adjoint Operators** Volodymyr Koshmanenko, Mykola Dudkin, 2016-07-08 This monograph presents the newly developed method of rigged Hilbert spaces as a modern approach in singular perturbation theory A key notion of this approach is the Lax Berezansky triple of Hilbert spaces embedded one into another which specifies the well known Gelfand topological triple All kinds of singular interactions described by potentials supported on small sets like the Dirac potentials fractals singular measures high degree super singular expressions admit a rigorous

treatment only in terms of the equipped spaces and their scales The main idea of the method is to use singular perturbations to change inner products in the starting rigged space and the construction of the perturbed operator by the Berezansky canonical isomorphism which connects the positive and negative spaces from a new rigged triplet The approach combines three powerful tools of functional analysis based on the Birman Krein Vishik theory of self adjoint extensions of symmetric operators the theory of singular quadratic forms and the theory of rigged Hilbert spaces The book will appeal to researchers in mathematics and mathematical physics studying the scales of densely embedded Hilbert spaces the singular perturbations phenomenon and singular interaction problems

Gaussian Random Fields - Proceedings Of The Third Nagayo Levy Seminar Kazufumi Ito,Takeyuki Hida,1991-11-29 These proceedings emphasize new mathematical problems discussed in line with white noise analysis Many papers deal with mathematical questions arising from actual phenomena Various applications to stochastic differential equations quantum field theory functional integration such as Feynman integrals limit theorems in probability are also discussed

Geometric Methods in Physics XXXVIII Piotr Kielanowski,Anatol Odziejewicz,Emma Previato,2020-10-27 The book consists of articles based on the XXXVIII Bia owie a Workshop on Geometric Methods in Physics 2019 The series of Bia owie a workshops attended by a community of experts at the crossroads of mathematics and physics is a major annual event in the field The works in this book based on presentations given at the workshop are previously unpublished at the cutting edge of current research typically grounded in geometry and analysis with applications to classical and quantum physics For the past eight years the Bia owie a Workshops have been complemented by a School on Geometry and Physics comprising series of advanced lectures for graduate students and early career researchers The extended abstracts of the five lecture series that were given in the eighth school are included The unique character of the Workshop and School series draws on the venue a famous historical cultural and environmental site in the Bia owie a forest a UNESCO World Heritage Centre in the east of Poland lectures are given in the Nature and Forest Museum and local traditions are interwoven with the scientific activities The chapter Toeplitz Extensions in Noncommutative Topology and Mathematical Physics is available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](https://www.springer.com)
