**Phonological Treatment of Speech Sound Disorders in Children**

Jacqueline Bauman-Waengler, Diane Garcia, 2018-12-06 Phonological Treatment of Speech Sound Disorders in Children A Practical Guide provides speech language pathologists with a road map for implementation of selected treatment methods that can have a significant positive impact on children's speech intelligibility and communicative effectiveness. This practical workbook is useful for speech language pathologists who work with children with speech sound disorders in schools, private practices, or clinics. It can also be used as a supplementary text for a clinical methods course or within a speech sound disorders clinical practicum. This workbook is an easy to follow guide that allows clinicians to move from assessment results to treatment planning and execution. The methods included are those that demonstrate treatment efficacy and include minimal pair therapy, multiple oppositions, maximal oppositions, complexity approaches, phonotactic therapy, core vocabulary intervention cycles approach, and using phonological phonemic awareness within the treatment protocol for speech sound disorders. Discussion of each method includes the collection and analysis of data, the establishment of intervention targets and goals, and therapy guidelines. Case studies are used to demonstrate each treatment paradigm and suggestions for use within a group therapy format are provided. Current references allow the clinicians to further study each of the methods presented. Key Features: Presents methods which have documented success treating children with speech sound disorders. Practically oriented so that readers can easily see the progression from the data to treatment goals and outcome measures. Utilizes case studies to further exemplify the specific phonological method. Demonstrates the use of techniques within a group therapy setting which is the main mode of delivery for most clinicians. Supplies materials to be used in specific therapy contexts including data collection forms, sample goals, flowcharts for target selection and progress monitoring worksheets. Provides suggestions for which therapy methods might be better suited for individual children based on research supporting age, severity levels and characteristics of the disorder. Includes video case studies demonstrating children of varying ages and complexity of phonological disorder. Regardless of the type or etiology of a speech sound disorder, phonological treatment methods are an important component of an effective intervention plan. For children who present with a phonological disorder as their primary impairment, one or more of these methods may form the core of their therapy program. For others, particularly those with complex needs, phonological treatment may be one piece of a much larger intervention puzzle. In recent decades, exciting developments have occurred regarding the treatment of phonological deficits. The result is therapeutic protocols that are more efficient and effective. This workbook is designed to help bridge the gap between research and application.

*The Role of Letter-Speech Sound Integration in Typical and Atypical Reading Development*

Jurgen Tijms, Silvia Brem, Gorka Fraga González, Iliana I. Karipidis, 2020-07-24

Fluency is the quintessence of effective reading. To obtain socio-economic success, fluent reading is of primordial importance and reading is considered a crucial marker of an individual's life course. Approximately 5% of children are affected by developmental dyslexia, exhibiting inaccurate word recognition, spelling, phonological decoding, and most importantly, severely dysfluent reading which remains as their most

characterizing and persistent deficit Unable to attain society's literacy demands individuals with dyslexia are at severe risk for adverse academic economic and psychosocial consequences Recently it has been posited that the development of automatic letter speech sound LSS integration is critical in the acquisition of fluent reading skills and in particular that a failure to develop automatic LSS integration results in an impairment of reading fluency In support neurocognitive research has suggested that the development of automatized processing of LSS associations is an essential step in the formation of a functional neural network for reading Furthermore both neurocognitive and behavioural studies have suggested a less efficient LSS integration in children with dyslexia than in typical readers Finally results from intervention studies have suggested that training LSS might be a promising approach to ameliorate dysfluent reading in children with dyslexia Nonetheless there is still a considerable gap of knowledge in our understanding of the mechanisms by which learning LSS associations relate to dys fluent reading
