2008 Ap Calculus Ab Multiple Choice:

Stereotype Threat Michael Inzlicht, Toni Schmader, 2012 The 21st century has brought with it unparalleled levels of diversity in the classroom and the workforce. It is now common to see in elementary school, high school, and university classrooms, not to mention boardrooms and factory floors, a mixture of ethnicities, races, genders, and religious affiliations. But these changes in academic and economic opportunities have not directly translated into an elimination of group disparities in academic performance, career opportunities, and levels of advancement. Standard explanations for these disparities, which are vehemently debated in the scientific community and popular press, range from the view that women and minorities are genetically endowed with inferior abilities to the view that members of these demographic groups are products of environments that frustrate the development of the skills needed for success. Although these explanations differ along a continuum of nature vs. nurture, they share in common a presumption that a large chunk of our population lacks the potential to achieve academic and career success. In contrast, the research summarized in this book suggests that factors in one's immediate situation play a critical yet underappreciated role in temporarily suppressing the intellectual performance of women and minorities, creating an illusion of group differences in ability. Research conducted over the course of the last fifteen years suggests the mere existence of cultural stereotypes that assert the intellectual inferiority of these groups creates a threatening intellectual environment for stigmatized individuals, a climate where anything they say or do is interpreted through the lens of low expectations. This stereotype threat can ultimately interfere with intellectual functioning and academic engagement, setting the stage for later differences in educational attainment, career choice, and job advancement.

Making Software Andy Oram, Greg Wilson, 2010-10-14 Many claims are made about how certain tools, technologies, and practices improve software development. But which claims are verifiable, and which are merely wishful thinking? In this book, leading thinkers such as Steve McConnell, Barry Boehm, and Barbara Kitchenham offer essays that uncover the truth and unmask myths commonly held among the software development community. Their insights may surprise you: Are some programmers really ten times more productive than others? Does writing tests first help you develop better code faster? Can code metrics predict the number of bugs in a piece of software? Do design patterns actually make better software? What effect does personality have on pair programming? What matters more, how far apart people are geographically or how far apart they are in the org chart? Contributors include Jorge Aranda, Tom Ball, Victor R. Basili, Andrew Begel, Christian Bird, Barry Boehm, Marcelo Cataldo, Steven Clarke, Jason Cohen, Robert DeLine, Madeline Diep, Hakan Erdogmus, Michael Godfrey, Mark Guzdial, Jo E. Hannay, Ahmed E.
