Social Learning Imitation:

Imitation and Social Learning in Robots, Humans and Animals Chrystopher L. Nehaniv, Kerstin

Dautenhahn, 2009-04-09 Mechanisms of imitation and social matching play a fundamental role in development communication interaction learning and culture. Their investigation in different agents animals humans and robots has significantly influenced our understanding of the nature and origins of social intelligence. Whilst such issues have traditionally been studied in areas such as psychology biology and ethnology it has become increasingly recognised that a constructive approach towards imitation and social learning via the synthesis of artificial agents can provide important insights into mechanisms and create artefacts that can be instructed and taught by imitation demonstration and social interaction rather than by explicit programming. This book studies increasingly sophisticated models and mechanisms of social matching behaviour and marks an important step towards the development of an interdisciplinary research field consolidating and providing a valuable reference for the increasing number of researchers in the field of imitation and social learning in robots humans and animals

Social Learn&Imitation IIs 254 John Dollard, Neal E. Miller, 2013-12-16

This is Volume XIII of eighteen in a collection of the Sociology of Behaviour and Psychology. Imitation has long been an important concept as well in social theory as in social practices. In their endeavour to explain how societies are organized and held together allow cultures are transmitted from one generation to the next social scientists have made wide use of the concept of imitation. As a key idea in theory and practice it has been the subject of much systematic discussion. Originally published in 1945. In this volume the authors have made a fresh attack upon the problem with a set of concepts which seem peculiarly relevant to it. If imitative tendencies are not instinctive they must be learned the argument runs discussion of how such learning takes place

[Recent Trends in Social Learning Theory](#) Ross D. Parke, 2014-05-10 Recent Trends in Social Learning Theory offers a convenient overview of the state of social learning theory. This book is organized into six chapters. Chapter 1 provides a detailed discussion of the social learning theory followed by an analysis of the theoretical views on the social reinforcement issue in Chapter 2. The contiguity theory of modeling and important role played by symbolic coding processes in imitation are described in Chapter 3. Chapter 4 elaborates the developmental analysis of imitation while Chapter 5 outlines an empirical and theoretical overview of the status of punishment and its role in the development of self control in children. The last chapter summarizes the contributions compiled in this text. This publication is recommended for students and professionals in child development and social and clinical psychology

Bounded Rationality Gerd Gigerenzer, Reinhard Selten, 2002-07-26 In a complex and uncertain world humans and animals make decisions under the constraints of limited knowledge resources and time. Yet models of rational decision making in economics cognitive science biology and other fields largely ignore these real constraints and instead assume agents with perfect information and unlimited time. About forty years ago Herbert Simon challenged this view with his notion of bounded rationality. Today

bounded rationality has become a fashionable term used for disparate views of reasoning. This book promotes bounded rationality as the key to understanding how real people make decisions. Using the concept of an adaptive toolbox a repertoire of fast and frugal rules for decision making under uncertainty it attempts to impose more order and coherence on the idea of bounded rationality. The contributors view bounded rationality neither as optimization under constraints nor as the study of people's reasoning fallacies. The strategies in the adaptive toolbox dispense with optimization and for the most part with calculations of probabilities and utilities. The book extends the concept of bounded rationality from cognitive tools to emotions it analyzes social norms imitation and other cultural tools as rational strategies and it shows how smart heuristics can exploit the structure of environments.

Sociable Robots and the Future of Social Relations

Raul Hakli, Marco Nørskov, 2014-12-15. The robotics industry is growing rapidly and to a large extent the development of this market sector is due to the area of social robotics the production of robots that are designed to enter the space of human social interaction both physically and semantically. Since social robots present a new type of social agent they have been aptly classified as a disruptive technology i.e. the sort of technology which affects the core of our current social practices and might lead to profound cultural and social change. Due to its disruptive and innovative potential social robotics raises not only questions about utility ethics and legal aspects but calls for a philosophy the comprehensive philosophical reflection from the perspectives of all philosophical disciplines. This book presents the proceedings of the first conference in this new area Robo Philosophy 2014 Sociable Robots and the Future of Social Relations held in Aarhus Denmark in August 2014. The short papers and abstracts collected here address questions of social robotics from the perspectives of philosophy of mind social ontology ethics meta ethics political philosophy aesthetics intercultural philosophy and metaphilosophy. Social robotics is still in its early stages but it is precisely now that we need to reflect its possible cultural repercussions. This book is accessible to a wide readership and will be of interest to everyone involved in the development and use of social robotics applications from social roboticists to policy makers.

Cognitive Gadgets Cecilia Heyes, 2018-04-16. Adult humans have impressive pieces of cognitive equipment but in Cecilia Heyes's view these cognitive gadgets are not programmed in the genes. They are constructed over the course of childhood through social interaction. From birth our malleable minds learn from our culture soaked human environment not only what to think but how to think it.

Media and Suicide

Thomas Niederkrotenthaler, Steven Stack, 2017-07-28. Somewhere in the world in the next forty seconds a person is going to commit suicide. Globally suicides account for 50 percent of all violent deaths among men and 71 percent for women. Despite suicide prevention programs therapy and pharmacological treatments the suicide rate is either increasing or remaining high around the world. Media and Suicide holds traditional and emergent media accountable for influencing an individual's decision to commit suicide. Global experts present research historical analysis theoretical disputes including discussion on the Werther and Papageno effects and policy regarding the media's impact on suicide. They answer questions about the effects of different

types of media and storytelling show how the impact of social media can be diminished discuss internet bullying mass shootings and mass suicides show the effects of recovery stories and much more The editors also present examples of suicide policy in the United States Switzerland the United Kingdom Ireland and Hong Kong on how to best communicate reporting guidelines to decrease the copycat effect especially in less developed nations where most of the world s nearly one million suicides occur each year Although there is much work to be done to prevent media influenced suicide this innovative volume will contribute a large piece to this complex puzzle
