**The social shaping of science**, 1971      **Shaping Science** Janet Vertesi, 2020-11-06 A fascinating inside look at NASA missions that provides important insight on the organizational aspects of scientific collaboration American Journal of Sociology In *Shaping Science* Janet Vertesi draws on a decade of immersive ethnography with NASA's robotic spacecraft teams to create a comparative account of two great space missions of the early 2000s Although these missions featured robotic explorers on the frontiers of the solar system bravely investigating new worlds their commands were issued from millions of miles away by a very human team By examining the two teams formal structures decision making techniques and informal work practices in the day to day process of mission planning Vertesi shows just how deeply entangled a team's local organizational context is with the knowledge they produce about other worlds Using extensive embedded experiences on two NASA spacecraft teams this is the first book to apply organizational studies of work to the laboratory environment in order to analyze the production of scientific knowledge itself Engaging and deeply researched *Shaping Science* demonstrates the significant influence that the social organization of a scientific team can have on the practices of that team and the results they yield No matter how the lakes on Titan shimmer or what the mineralogy of a particular Martian rock turns out to be it was the people behind the spacecraft keyboards and endless teleconferences that drove what these interplanetary robots discovered I'm glad to have come to know them even better through this book *Nature* A fun illuminating read scholars of science technology work and organizations will find much to appreciate American Journal of Sociology Will be of great interest to all historians of science *Technology and Culture*      *Shaping Science and Technology Policy* David H. Guston, Daniel Sarewitz, 2007-02-01 With scientific progress occurring at a breathtaking pace science and technology policy has never been more important than it is today Yet there is a very real lack of public discourse about policy making and government involvement in science remains shrouded in both mystery and misunderstanding Who is making choices about technology policy and who stands to win or lose from these choices What criteria are being used to make decisions and why Does government involvement help or hinder scientific research *Shaping Science and Technology Policy* brings together an exciting and diverse group of emerging scholars both practitioners and academic experts to investigate current issues in science and technology policy Essays explore such topics as globalization the shifting boundary between public and private informed consent in human participation in scientific research intellectual property and university science and the distribution of the costs and benefits of research Contributors Charlotte Augst Grant Black Mark Brown Kevin Elliott Patrick Feng Pamela M Franklin Carolyn Gideon Ten N Hamilton Brian A Jackson Shobita Parthasarathy Jason W Patton A Abigail Payne Bhaven Sampat Christian Sandvig Sheryl Winston Smith Michael Whong Barr      **The social Shaping of technology**, 1987      **Rethinking Science, Technology, and Social Change** Ralph Schroeder, 2007 *Rethinking Science Technology and Social Change* challenges the prevailing notion that science and technology are constructed or socially shaped The text

puts forth a case for technological determinism based on a realistic and pragmatic account of science and technology informed by historical comparisons Schroeder begins by exploring the social organization of scientific and technological advances the intersecting trajectories of big science and technological systems and the impact of science and technology on economic change He goes on to discuss the social implications of technology including the way that it affects politics and consumption The book then rethinks traditional theories about the relationship between science technology and social change The argument presented shifts the debate on topics such as the relationship between growth and sustainability and thus has important policy implications This book will be of great interest to scholars scientists and anyone interested in understanding how science and technology are transforming our world **The Social Contexts of Research** Saad

Zaghloul Nagi, Ronald G. Corwin, 1972 Science of Science, 1983 *The Social Construction of Science* T.

Jagtenberg, 2012-12-06 This book concerns the institutionalisation of the physical sciences The book breaks with the established tradition in the history philosophy and sociology of sciences by attempting to capture both the cognitive and social dimensions of institutionalisation in one unified analysis This unification has been achieved through a treatment of research as goal directed social action a theme which has been developed both theoretically and empirically The analysis presented is therefore unique in its breadth of focus and shows how the traditional concerns of sociology with generalised macro structures of meaning and action can be related to the lifeworlds of individual scientists The sociology of the sciences is still today a relative newcomer to the field of sciences studies which has traditionally been dominated by the history and philosophy of the sciences I hope that this book reflects the excitement I experienced in being able to respond to the debates and concepts which erupted in that particularly fertile period following the publication of Kuhn's Structure of Scientific Revolutions in 1962 a period from which a cognitively oriented sociology of the sciences was to emerge as a serious challenger to orthodoxies in the history philosophy and sociology of sciences **Society, the Endless Frontier** Paraskevas Caracostas, Ugur Muldur, 1998 IN THE 21ST CENTURY Book Review Digest, 1972 Excerpts from and citations to reviews of more than 8 000 books each year drawn from coverage of 109 publications Book Review Digest provides citations to and excerpts of reviews of current juvenile and adult fiction and nonfiction in the English language Reviews of the following types of books are excluded government publications textbooks and technical books in the sciences and law Reviews of books on science for the general reader however are included The reviews originate in a group of selected periodicals in the humanities social sciences and general science published in the United States Canada and Great Britain Publisher **The Social Construction of Technological Systems, anniversary edition** Wiebe E. Bijker, Thomas Parke Hughes, Trevor Pinch, 2012-05-18 An anniversary edition of an influential book that introduced a groundbreaking approach to the study of science technology and society This pioneering book first published in 1987 launched the new field of social studies of technology It introduced a method of inquiry social construction of technology or SCOT that became a key part of the wider

discipline of science and technology studies The book helped the MIT Press shape its STS list and inspired the Inside Technology series The thirteen essays in the book tell stories about such varied technologies as thirteenth century galleys eighteenth century cooking stoves and twentieth century missile systems Taken together they affirm the fruitfulness of an approach to the study of technology that gives equal weight to technical social economic and political questions and they demonstrate the illuminating effects of the integration of empirics and theory The approaches in this volume collectively called SCOT after the volume s title have since broadened their scope and twenty five years after the publication of this book it is difficult to think of a technology that has not been studied from a SCOT perspective and impossible to think of a technology that cannot be studied that way **The Social Construction of Technological Systems, anniversary edition**
