and the evolution of related theories and thoughts with the methodology of interdisciplinary research. The human society is in the stage of major historic transition and enters the digital world with the main goal of developing the artificial world. In this world the development of digital economics is significantly characterized by the deep interaction between the real and the virtual worlds while the key triggering this paradigm reform is the evolution of ideas since the modern times. While involving the field of computer these thoughts are also related to the fields of philosophy, ethics, communication and economics. Therefore the results of the research on the history of ideas related to digital economics are required to really understand the depth of this discipline. If computationalism is the most important paradigm evolution of natural science the most important paradigm evolution of social science is interdisciplinary complex science. In the meantime this book is the most significant in understanding the nature of paradigm evolution related to the development of digital economics from the perspective of complex science and interdisciplinary systematic researches. Digital economics is in the foundation laying phase while this book mainly aims to historically narrate the thoughts of this discipline and hopes that readers can understand the influence of ideas in the old era on shaping the disciplines in the new era while exploring this new discipline. The construction of digital economics is a process of evolution. This book will be helpful to understand the underlying logic of the ideas constructed by the thinkers in different fields. **Social Systems** Niklas Luhmann, 1995 Germany's most prominent social thinker here sets out a contribution to sociology that aims to rework our understanding of meaning and communication.
