People-Environment Studies: Promoting Sustainable Places and Behaviors Giuseppe Carrus, Tony Peter Craig, Adina Claudia Dumitru, Stefano Mastandrea, 2022-09-26 *Community Action and Climate Change* Jennifer Kent, 2015-11-19

The failure of recent international negotiations to progress global action on climate change has shifted attention to the emergence of grassroots sustainability initiatives. These civil society networks display the potential to implement social innovation and change processes from the bottom up. Recent scholarship has sought to theorise grassroots community based low carbon practices in terms of their sustainability transition potential. However there are few empirical examples that demonstrate the factors for success of community based social innovations in achieving more widespread adoption outside of their local sustainability niche. The book seeks to address two significant gaps related to grassroots climate action firstly the continuing dominance of the individualisation of responsibility for climate change action which presupposes that individuals hold both the ability and desire to shift their behaviours and lifestyle choices to align with a low carbon future. Secondly the potential for community based collectives to influence mainstream climate change governance an area significantly under researched. Drawing on empirical research into Australian Climate Action Groups (CAGs) and related international research the book argues that grassroots community based collective action on climate change holds the key to broader social change. This book will be of great interest to students and scholars of climate change, citizen participation, environmental sociology and sustainable development.

Tackling Long-Term Global Energy Problems Daniel Spreng, Thomas Flüeler, David L. Goldblatt, Jürg Minsch, 2012-01-03. This book makes a case for a multidisciplinary and transdisciplinary approach to energy research, one that brings more of the social sciences to bear. Featuring eight studies from across the spectrum of the social sciences, each applying multiple disciplines to one or more energy related problems, the book demonstrates the strong analytical and policy making potential of such a broadened perspective. Case studies include energy transitions of households in developing countries, the curse of oil politics and visions for renewables, economics and ethics in emissions trading and carbon capture and storage.

The Social and Behavioural Aspects of Climate Change Pim Martens, Chiung Ting Chang, 2017-09-08. Over the past few years and certainly since the publication of the Stern Report, there has been increasing recognition that climate change is not only an environmental crisis but one with important social and economic dimensions. There is now a growing need for multi disciplinary research and for the science of climate change to be usefully translated for policy makers. Until very recently, scientific and policy emphasis on climate change has focused almost exclusively on mitigation efforts, mechanisms and regulations to reduce greenhouse gas emissions. The success of such efforts to date is debatable. In fact, the impact of ever more stringent emission control programmes could potentially have enormous social consequences. Little effort has been expended on the exploration of a systematic evaluation of climate stabilization benefits or

the costs of adapting to a changed climate let alone attempting to integrate different approaches There is an increasing recognition that the key actors in the climate crisis also need to be preparing for change that is unavoidable This has resulted in a greater consideration of vulnerability and adaptation The book based on the research programme Vulnerability Adaptation and Mitigation VAM which ran from 2004 to 2010 funded by the Netherlands Organisation for Scientific Research NWO presents a cluster of case studies of industries communities and institutions which each show how vulnerability adaptation and mitigation analyses can be integrated using social behavioural sciences Each chapter makes specific recommendations for the studied industry sector community or institution analyses the latest research developments of the field and identifies priorities for future research The book argues that the inherent complexity of climate change will ultimately require a much more integrated response both scientifically to better understand multiple causes and impacts as well as at the scientific policy interface where new forms of engagement between scientists policy makers and wider stakeholder groups can make a valuable contribution to more informed climate policy and practice The book is particularly timely as the scientific research and policy debate is shifting from one of problem framing to new agendas that are much more concerned with implementation the improvement of assessment methodologies from a multi disciplinary perspective and the reframing of current scientific understanding towards mitigation adaptation and vulnerability A critical element in responding to the climate change challenge will be to ensure the translation of these new scientific insights into innovative policy and practice on the ground This book provides some fundamental elements to answer this need The Social and Behavioural Aspects of Climate Change Linking Vulnerability Adaptation and Mitigation will be essential reading for social science researchers and policy managers in the area of climate change as well as for those who want to know what the social and behavioural sciences can contribute toward coping with climate hazards NGOs law firms and businesses in the energy sector or other climate related fields will also find the book of great value

Achieving Well-Being - Bridging Psychological Distance in Our Environment Hong Chen,Yan Sun,2022-04-01 **Social Psychology Australian & New Zealand Edition** Saul Kassin,Steven Fein,Hazel Rose Markus,Kerry Anne McBain,Lisa Williams,2019-08-01 Using a balanced approach Social Psychology 2e connects social psychology theories research methods and basic findings to real world applications with a current events emphasis Coverage of culture and diversity is integrated into every chapter in addition to strong representation throughout of regionally relevant topics such as Indigenous perspectives environmental psychology and conservation community psychology gender identity and attraction and close relationships including same sex marriage in different cultures gendered behaviours when dating and updated data on online dating making this visually engaging textbook useful for all social psychology students The Social and Behavioural Aspects of Climate Change Pim Martens,2017 Over the past few years and certainly since the publication of the Stern Report there has been increasing recognition that climate change is not only an environmental crisis but one with important social and economic dimensions

There is now a growing need for multi disciplinary research and for the science of climate change to be usefully translated for policy makers. Until very recently scientific and policy emphasis on climate change has focused almost exclusively on mitigation efforts, mechanisms and regulations to reduce greenhouse gas emissions. The success of such efforts to date is debatable. In fact the impact of ever more stringent emission control programmes could potentially have enormous social consequences. Little effort has been expended on the exploration of a systematic evaluation of climate stabilization benefits or the costs of adapting to a changed climate let alone attempting to integrate different approaches. There is an increasing recognition that the key actors in the climate crisis also need to be preparing for change that is unavoidable. This has resulted in a greater consideration of vulnerability and adaptation. The book based on the research programme Vulnerability Adaptation and Mitigation VAM which ran from 2004 to 2010 funded by the Netherlands Organisation for Scientific Research NWO presents a cluster of case studies of industries, communities and institutions which each show how vulnerability, adaptation and mitigation analyses can be integrated using social behavioural sciences. Each chapter makes specific recommendations for the studied industry sector, community or institution, analyses the latest research developments of the field and identifies priorities for future research. The book argues that the inherent complexity of climate change will ultimately require a much more integrated response both scientifically to better understand multiple causes and impacts as well as at the scientific policy interface where new forms of engagement between scientists, policy makers and wider stakeholder groups can make a valuable contribution to more informed climate policy and practice. The book is particularly timely as the scientific research and policy debate is shifting from one of problem framing to new agendas that are much more concerned with implementation, the improvement of assessment methodologies from a multi disciplinary perspective and the reframing of current scientific understanding towards mitigation, adaptation and vulnerability. A critical element in responding to the climate change challenge will be to ensure the translation of these new scientific insights into innovative policy and practice on the ground. This book provides some fundamental elements to answer this need. *The Social and Behavioural Aspects of Climate Change: Linking Vulnerability, Adaptation and Mitigation* will be essential reading for social science researchers and policy managers in the area of climate change as well as for those who want to know what the social and behavioural sciences can contribute toward coping with climate hazards. NGOs, law firms and businesses in the energy sector or other climate related fields will also find the book of great value. Provided by publisher [Gender and the Social Dimensions of Climate Change](#) Amber J. Fletcher, Maureen G. Reed, 2022-09-01. Dispelling the myth that people in the Global North share similar experiences of climate change, this book reveals how intersecting social dimensions of climate change, people, processes and institutions give rise to different experiences of loss, adaptation and resilience among those living in rural and resource contexts of the Global North. Bringing together leading feminist researchers and practitioners from three countries, Australia, Canada and Spain, this collection documents gender relations in fossil fuel mining and extractive

industries in land based livelihoods in approaches for inclusive environmental policy and in the lived experience of climate hazards Uniquely the book brings together the voices expertise and experiences of both academic researchers and women whose views have not been prioritized in formal policies for example women in agriculture Indigenous women immigrant women and women in male dominated professions Their contributions are insightful and compelling highlighting the significance of gaining diverse perspectives for a fuller understanding of climate change impacts more equitable processes and strategies for climate change adaptation and a more welcoming climate future This book will be vital reading for students and scholars of gender studies environmental studies environmental sociology geography and sustainability science It will provide important insights for planners decision makers and community advocates to strengthen their understanding of social dimensions of climate change and to develop more inclusive and equitable adaptation policies plans and practices

Brinkman's cumulatieve catalogus van boeken ,2002 Voorts een alphabetische lijst van Nederlandsche boeken in Belgi uitgegeven **Brinkman's Cumulatieve catalogus van boeken de in Nederland en vlaanderen zijn uitgegeven of herdrukke** ,2001 Combating Climate Change National Assessment of UK Forestry and Climate Change Steering Group,2009 This assessment presents a science based analysis of the current and potential capabilities of the UK s forests and forest products to contribute to the mitigation of climate change It shows unequivocally that 1 a significant contribution to mitigation could be made by maintaining and increasing the rates at which CO₂ is removed from the atmosphere by the UK s forests the abatement of emissions 2 there are other major contributions that forests and trees can make for example in urban environments and 3 that there are areas where substantial research is required to assess and reduce impacts and to develop the contribution of UK forestry to the mitigation of and adaptation to climate change The report follows the IPCC convention of identifying key findings at the start of each chapter Authors have also identified research priorities at the end of their respective chapters and these proposals require serious and urgent consideration Gaps in understanding are identified and in some instances there is a clear requirement for more scientific evidence in order that uncertainties in the projected impacts of climate change can be reduced The driver in the new research programmes will be the need to enhance the contribution that UK trees and woodlands can make to a low carbon economy It is the expressed intention of the report to provide the detailed evidence required to achieve sustainable forest management under what will be complex and changing climatic circumstances **Environment & Planning A.** ,2011 **Community Governance and Citizen-Driven Initiatives in Climate Change Mitigation** Jens Hoff, Quentin Gausset, 2015-08-20 One of the most heartening developments in climate change mitigation in recent years has been the increasing attention paid to the principle of thinking globally and acting locally The failure of the international community to reach significant global agreements on the reduction of greenhouse gas emissions has led local governments environmental organisations and citizens themselves to focus increasingly on the local possibilities for action on climate change This book analyses the strengths and weaknesses of the co

production of climate policies that take place where citizen engagement and local initiatives converge with public agencies Case studies from Northern Europe Australia New Zealand and the USA reveal that traditional individualist approaches to promoting environmental behaviour epitomised by information campaigns and economic incentives cannot trigger the deep behavioural changes required to materially improve our response to climate change Only by marshalling the forces of thousands and eventually millions of citizens can we manage to reach environmental sceptics reinforce political action and create the new social norms that are sorely needed in our local and global response to climate change This book will be of great relevance to scholars and policy makers with an interest in climate change politics and governance community engagement and sustainable development

Investment and Growth in the Time of Climate Change Atanas Kolev (Economist), Atanas Kolev, 2012 Cognisant of the many facets of climate change this report looks through the lens of economics that is the social science that measures the economic impact of climate change and the costs and benefits of trying to mitigate it and adapt to it From an investment perspective issues for study include the balance between investment in mitigating greenhouse gas emissions and adaptation to climate change the urgency and timing of investing in both obstacles to investment and policies to remove them and make investment profitable From a growth perspective issues of interest include the link between climate action and economic growth the short term and the long term dimensions of this link and the importance of innovation as an interface between climate action and economic growth One of the key messages from this report is that there is unexploited scope for making Europe's climate action more efficient growth friendly and in tune with fiscal constraints publisher's description

World Energy Assessment United Nations Development Programme, 2000 The report discusses the linkages between energy and economic social environmental and security issues and analyses the contradictions between current patterns of use and objectives in these areas The WEA also reviews energy resources and technology options from the point of view of sustainability including better end use efficiency greater reliance on renewable sources of energy and next generation nuclear and fossil fuel technologies Further the report examines plausible scenarios for combining various options to achieve a sustainable and relatively prosperous future The report concludes by examining policy options for producing and using energy in ways that are compatible with sustainable development
