**Environment, Power, and Society for the Twenty-First Century** Howard T. Odum, 2007-06-08 Howard T Odum possessed one of the most innovative minds of the twentieth century He pioneered the fields of ecological engineering ecological economics and environmental accounting working throughout his life to better understand the interrelationships of energy environment and society and their importance to the well being of humanity and the planet This volume is a major modernization of Odum's classic work on the significance of power and its role in society bringing his approach and insight to a whole new generation of students and scholars For this edition Odum refines his original theories and introduces two new measures energy and transformity These concepts can be used to evaluate and compare systems and their transformation and use of resources by accounting for all the energies and materials that flow in and out and expressing them in equivalent ability to do work Natural energies such as solar radiation and the cycling of water carbon nitrogen and oxygen are diagrammed in terms of energy and energy flow Through this method Odum reveals the similarities between human economic and social systems and the ecosystems of the natural world In the process we discover that our survival and prosperity are regulated as much by the laws of energetics as are systems of the physical and chemical world

Cicourel,2014-08-21 After a period in which sociology was torn apart by the polarized claims of micro and macro methodology an increasing number of sociologists are now attempting a fusion of the two approaches In this volume some of the most distinguished sociologists set out possible resolutions of the debate Each of the chapters placed in perspective by the editors prologue approaches the problem from a unique angle Aaron Cicourel argues for a macro basis of social interaction Randall Collins shows how the macro consists of an aggregate of micro episodes Troy Duster presents a methodological model for generating a systematic data base across different contexts of social action through his examination of the procedures governing screening for inherited disorders Rom Harr launches a philosophical attack on what he sees as a spurious bifurcation of micro and macro levels Anthony Giddens explores the problem of unintended consequences and Gilles Fauconnier through a depiction of Jesuitical casuistry shows how vital clues to macro structure can be elicited from the micro phenomenon of language Victor Lidz continues the language theme in his chapter on the implications of advances in linguistic theory for macro systems theory Niklas Luhmann illustrates the micro macro problem by the communication about law in interaction systems The theory of historical materialism is reassessed by Jürgen Habermas Taking the example of Renault and electric vehicles Michel Callon and Bruno Latour investigate how micro actor status is attained and the sociologist's involvement in this transformation Finally Pierre Bourdieu writing on men and

machines analyses the historical imperatives that create the complex relation between man and his environment
