

Lecture 3 Different approaches to risk: Sociology

- We now move on to sociological theories. Note the change of focus and methodology.
- The two central theories of sociological risk research which started to dominate the field in the early 1990s were the *Risk and Culture* approach of Douglas and Wildavsky (1982) and the *Risk Society* approach of Ulrich Beck (1986, 1992).
- Also Giddens approach of the “*Third way*” was significant: Giddens follows through the implications of a critical citizenry and a decline in the capacity of nation states to manage the political economy for the political order.

Arminger,Clifford C. Clogg,M.E. Sobel,1995 Contributors thoroughly survey the most important statistical models used in empirical research in the social and behavioral sciences Following a common format each chapter introduces a model illustrates the types of problems and data for which the model is best used provides numerous examples that draw upon familiar models or procedures and includes material on software that can be used to estimate the models studied This handbook will aid researchers methodologists graduate students and statisticians to understand and resolve common modeling problems

Basic Principles of Structural Equation Modeling

Ralph O. Mueller,1999-06-04 During the last two decades structural equation modeling SEM has emerged as a powerful multivariate data analysis tool in social science research settings especially in the fields of sociology psychology and education Although its roots can be traced back to the first half of this century when Spearman 1904 developed factor analysis and Wright 1934 introduced path analysis it was not until the 1970s that the works by Karl Joreskog and his associates e g Joreskog 1977 Joreskog and Van Thillo 1973 began to make general SEM techniques accessible to the social and behavioral science research communities Today with the development and increasing availability of SEM computer programs SEM has become a well established and respected data analysis method incorporating many of the traditional analysis techniques as special cases State of the art SEM software packages such as LISREL Joreskog and Sorbom 1993a b and EQS Bentler 1993 Bentler and Wu 1993 handle a variety of ordinary least squares regression designs as well as complex structural equation models involving variables with arbitrary distributions Unfortunately many students and researchers hesitate to use SEM methods perhaps due to the somewhat complex underlying statistical representation and theory In my opinion social science students and researchers can benefit greatly from acquiring knowledge and skills in SEM since the methods applied appropriately can
