### **Social Skills Training and Psychiatric Nursing** Owen Hargie, Patrick J.

McCartan, 2025-09-17 When it was originally published in 1986 this book was one of the few to be written on social skills and mental health specifically for nurses. Yet it is nurses who are uniquely placed to improve the skills of those with mental illness since it is they who often have most contact with patients or clients. This book examines the place of social skills training in the practice of psychiatric nursing. It provides relevant background to the evidence for limited social skills in psychiatric patients and the expanding role of the nurse and considers more practical elements such as selection and assessment of patients for a programme goal setting role play feedback and group versus individual approaches. The book also analyses relevant skills themselves such as nonverbal communication and being assertive. The book is aimed at both trained and student psychiatric nurses

**Radical Approaches to Social Skills Training** Peter Trower, 2013-12-16 Originally published in 1984 one of the few facts that emerged clearly in the beleaguered field of psychology and mental health at the time was the extent of poor social skills in psychiatric patients the mentally handicapped and problem adolescents As a result during the 1970s social skills training espoused as a form of behaviour therapy seemed to offer great promise based on the notion that social skills like any other skills are learnt and can be taught if lacking However in evaluating social skills training many investigators found that skills did not endure and generalise This book attempts a major re assessment of social skills training It examines the underlying paradigms which are shown to be fundamentally behaviourist Such paradigms it is argued severely constrain the aims and

method of current types of training. Thus the book develops what is termed an agency approach based on man as a social agent who actively constructs his own experiences and generates his own goal directed behaviour on the basis of those constructs. This new model is developed in both theoretical and practical ways in the main body of the book and should even today be of great interest to all those involved with social skills training.
